microbiologists and biotechnologists as well as students and researchers in the fields of molecular biology and biochemistry

The Prokaryotes Stanley Falkow, Eugene Rosenberg, Karl-Heinz Schleifer, Erko Stackebrandt, 2006-10-11 The revised Third Edition of *The Prokaryotes* acclaimed as a classic reference in the field offers new and updated articles by experts from around the world on taxa of relevance to medicine ecology and industry Entries combine phylogenetic and systematic data with insights into genetics physiology and application Existing entries have been revised to incorporate rapid progress and technological innovation The new edition improves on the lucid presentation logical layout and abundance of illustrations that readers rely on adding color illustration throughout Expanded to seven volumes in its print form the new edition adds a new searchable online version

Bacillus Colin R. Harwood, 2013-11-11 The genus *Bacillus* has a long history of importance both from an economic point of view and as a source of experimental microorganisms This volume critically reviews aspects of identification molecular biology and growth that are of importance for the current and anticipated future exploitation of members of this group In addition the volume includes a chapter on taxonomy as the importance of good taxonomy is often not fully appreciated on sporulation since so many important products are produced concomitantly with this process and we are beginning to understand the mechanisms by which the process is controlled and finally on the cell envelope as we are only just beginning to appreciate the significance of differences between the cell walls of gram positive and gram negative bacteria for productivity and processing The commercial importance of *Bacillus* lies mainly in the area of enzyme production for the food drink and detergent markets Increasingly however the ability of *Bacillus* to secrete proteins coupled with its regulatory acceptability has resulted in strenuous efforts to develop species of *Bacillus* as hosts for the production of value added heterologous proteins Difficulties have often been encountered indicating a need to divert more resources to improving our understanding of the molecular biology of members of this group Experience with *Escherichia coli* a far from ideal organism from a commercial point of view suggests that an increased investment in *Bacillus* is likely ultimately to be productive

Genetics and Biotechnology of Bacilli A.T. Cloning Stephen D. Fairbanks,2004 The terms recombinant DNA technology DNA cloning molecular cloning or gene cloning all refer to the same process the transfer of a DNA fragment of interest from one organism to a self replicating genetic element such as a bacterial plasmid The DNA of interest can then be propagated in a foreign host cell This technology has been around since the 1970s and it has become a common practice in molecular biology labs today Reproductive cloning is a technology used to generate an animal that has the same nuclear DNA as another currently or previously existing animal Dolly was created by reproductive cloning technology In a process called somatic cell nuclear transfer SCNT scientists transfer genetic material from the nucleus of a donor adult cell to an egg whose nucleus and thus its genetic material has been removed The reconstructed egg containing the DNA from a donor cell must be treated with chemicals or electric current in order to stimulate cell division Once the cloned embryo reaches a suitable stage it is transferred to the uterus of a female host where it continues to develop until birth Therapeutic cloning also called embryo cloning is the production of human embryos for use in research The goal of this process is not to create cloned human beings but rather to harvest stem cells that can be used to study human development and to treat disease Stem cells are important to biomedical researchers because they can be used to generate virtually any type of specialised cell in the human body This new book presents an up to date Chronology of Cloning along with current and selected abstracts dealing with cloning as well as a guide to books on the topic Access to the abstract and books sections is provided by title subject and author indexes

Genetics and Breeding of Industrial Microorganisms Christopher Ball, 2020-01-29 This text provides a clear exposition of genetic principles and problems with comprehensive up to date references Specialists who have collaborated closely with industry give an inside authentic view of the genetics and breeding of industrial microorganisms such as yeasts filamentous fungi actinomycetes pseudomonads and other bacteria of major industrial significance This book will be especially valuable to many professionals in the field of microbial genetics *Protein Secretion and Export in Bacteria* Henry C. Wu, Phang C. Tai, 2012-12-06 The last decade has witnessed rapid progress in our understanding of the mechanisms of protein export and secretion in both prokaryotic and eukaryotic cells Studies of protein secretion across the membranes of the rough endoplasmic reticulum have led to the formulation of the now classic signal hypothesis which has stimulated many discussions and new ideas and the identification of the signal recognition particle as an organelle in the initiation of the export process However more recent work pertaining to intragenic information related to targeting specific proteins for either secretion or membrane localization the energetics of protein secretion the timing of synthesis versus the initiation of export structural requirements for the processing of precursor proteins and the identification of the processing enzymes signal peptidases has been the result of a combined biochemical and genetic approach to the study of protein localization in bacteria While reviews on the biochemistry and genetics of protein secretion have appeared frequently in recent years this book attempts to summarize the current status and the future perspectives of this rapidly moving field in a single volume Topics covered in this book include the genetics of protein secretion in E coli biochemical analysis of protein export in vitro signal peptidases excretion of colicins and hemolysin in E coli protein secretion in Bacillus and protein secretion cloning vectors *Enzyme Technology* E. Maier, R. M. Lafferty, 2012-12-06 The main subject of the III Rotenburger Fermentation Symposium is enzyme technology Enzyme technology could be simply defined as the scientific study of proteinaceous catalysts derived from living organisms and the application of the knowledge to solve specific problems The scope of the application of enzyme technology ranges from medical to industrial uses and in the future even living organisms as a source of enzymes may be replaced by fully synthetic enzymes synzymes Although enzyme technology still remains a particular field of biotechnology the extremely rapid rate of expansion and the enormous increase in the diversification of all aspects of enzyme technology during the immediate past has created a certain tendency to separate biotechnology and enzyme technology from each other Certainly those areas of biotechnology characterized by astounding advances are enzyme technology bioreactor development and genetic manipulation as related to biotechnological processes However a glance at many of the common problems of biotechnology and enzyme technology such as diffusion barriers reactor design mass transport substrate or product inhibition phenomena and the effect of physical chemical parameters on process kinetics reveals that these two fields are inseparable with respect to research and application *Cumulated Index Medicus*, 1994 *Population Genetics of Bacteria* Society for General Microbiology. Siezen, Jan Kok, Tjakko Abee, Gertjan Schaafsma, 2002-09-30 Foods fermented with lactic acid bacteria are an important part of the human diet Lactic acid bacteria play an essential role in the preservation of food raw materials and contribute to the nutritional organoleptic and health properties of food products and animal feed The importance of lactic acid bacteria in the production of foods throughout the world has resulted in a continued scientific interest in these micro organisms over the last two decades by academic research groups as well as

by industry This research has resulted in a number of important scientific breakthroughs and has led to new applications The most recent of these advances is the establishment of the complete genome sequences of a number of different lactic acid bacterial species To communicate and stimulate the research on lactic acid bacteria and their applications a series of tri annual symposia on lactic acid bacteria was started in 1983 under the auspices of the Netherlands Society for Microbiology NVVM which was later also supported by the Federation of European Microbiological Societies FEMS The aim of these state of the art symposia is to offer a unique platform for universities institutes and industry in this area of biotechnology to present recent work to obtain information on new developments and to exchange views with colleagues from all over the world on scientific progress and applications The growing number of participants at these symposia has been a clear demonstration of the interest of the international industrial and scientific community in this area of research The 7th Symposium is based on a number of plenary lectures that review the scientific progress of the last years in the different areas of research on lactic acid bacteria and which are documented in this special issue of Antonie van Leeuwenhoek
