Molecular Diversity and PCR-detection of Toxigenic Fusarium Species and Ochratoxigenic Fungi G. Mulè, John A. Bailey, B.M. Cooke, A. Logrieco, 2012-09-19 Toxigenic Fusarium species and ochratoxigenic fungi are responsible for various plant diseases which have important consequential effects on both human and animal health worldwide The development of rapid robust and sensitive detection methods based on new molecular technologies is urgently needed in order to identify fungal contamination in the field and quantify toxin accumulation in food and animal feed Most of the contributions in this special issue are from results obtained through the EU 5th Framework project QLKI CT 1998 01380 DETOX FUNGI early detection of toxigenic Fusarium species and ochratoxigenic fungi in plant products which has strongly stimulated interaction and co operation between many European scientists Valuable contributions from other scientists have guaranteed a complete overview of this stimulating and interesting topic This is the third special issue published in the European Journal of Plant Pathology concerning mycotoxigenic fungi under the aegis of COST Action 835 Agriculturally Important Toxigenic Fungi The first two dealt with Mycotoxins in Plant Disease Vol 108 7 2002 and Epidemiology of Mycotoxin Producing Fungi Vol 109 7 2003 The present issue contains contributions which cover aspects of molecular diversity phylogeny and PCR detection of toxigenic Fusarium species and various ochratoxigenic fungi We hope these will prove helpful to researchers involved in similar work and will stimulate the future studies required for the early detection of these fungi which is so essential for overcoming the health risks associated with mycotoxin contaminated food products

Toxigenic Fusarium Species, Identity and Mycotoxicology W. F. O. Marasas,Paul E. Nelson,T. A. Toussoun,1984 The taxonomy of fungi in the genus Fusarium is complex and confusing because of the different taxonomic systems in use in various parts of the world Taxonomy of the genus is further complicated by its extreme variability in culture and by the fact that Fusarium species mutate and degenerate rapidly in culture This situation has led to great confusion in the extensive literature on Fusarium mycotoxicoses because the same fungus is known under a variety of different names in different countries This book a comparative taxonomic study of Fusarium species reported to be toxigenic in published findings represents the first serious attempt to clarify the confusion in the taxonomy and nomenclature of toxigenic Fusarium species It is a catalog of the isolates in the International Toxigenic Fusarium Reference Collection which is made up of isolates collected from research workers around the world Information on each isolate includes the correct identification references to publications in which the isolate is cited and information on the toxic properties of and mycotoxins reported to be produced by each isolate The nomenclature used follows the system given in Fusarium Species An Illustrated Manual for Identification These two volumes will be useful to anyone interested in the mycotoxins produced by Fusarium species

Fusarium - Plant Diseases, Pathogen Diversity, Genetic Diversity, Resistance and Molecular Markers Tulin Askun,2018 Fusarium species are ubiquitous environmental fungi and can cause severe invasive infections in plants They are crop pathogens and consumption of such infected crops can cause diseases in humans and animals Furthermore they act as spoilage organisms in stored products such as wheat sorghum rice and corn maize Fusarium species are mycotoxin producers and contaminate food and grains Therefore their eradication and management have economic importance as they can cause enormous economic and agricultural production losses Despite the fact that the genus Fusarium Link 1809 has been known for over 200 years new scientific information is being revealed by rapid advancements and breakthrough findings of interdisciplinary studies This

book presents an introductory overview of an update to the scientific knowledge about Fusarium. It discusses various aspects of Fusarium such as its genetic diversity, root rot incidence and severity, genetic resistance, molecular markers, mycotoxins, diseases caused by Fusarium and their management, and the biological control of these phytopathogens. Furthermore, it also elaborates upon new plant secondary metabolites that are effective against Fusarium and the molecular interaction between Fusarium and the plant.

Specialists from a number of different disciplines have contributed to this book which presents actual basic and applied findings on Fusarium species on their metabolites and taxonomy in connection with pathogenicity to cereal plants and potato tubers. Over 100 metabolites produced by Fusaria are described together with results of studies on their occurrence in agricultural products, their metabolism in farm animals, and possibilities of elimination and detoxification during technological processes. Pathogenic Fusarium species are described from the point of view of their taxonomy, profiles of produced metabolites, ecology, pathogenicity, and interaction with cereal tissues. Finally, some actual solutions to avoid cereal grain contamination are discussed mainly in connection with agricultural practices and breeding programmes. The interdisciplinary and comprehensive nature of the book makes it particularly useful to all who are studying or teaching plant pathology, plant breeding, animal nutrition, and any other area in which Fusaria and their metabolites play an important role.
