Extracellular

Nucleotides and Nucleosides: Release, Receptors, and Physiological & Pathophysiological Effects, 2003-09-10 Purinergic receptors are proteins that bind ATP as their extracellular ligand. Once thought only as an intracellular molecule that provides energy, ATP is also now considered an essential autocrine/paracrine agonist that acts extracellularly within tissues and tissue microenvironments. Receptors for ATP and its metabolites, so-called purinergic receptors, are essential membrane receptors that transduce the extracellular signal carried by ATP. Many cell types or tissues express multiple types of these receptors, often on the same cell. This volume will cover the history and overall impact of extracellular ATP signaling methods to detect ATP release and signaling, the molecular and cell biology of purinergic receptors, the pharmacology of purinergic receptors, the ion channel biophysics and biochemistry of P2X purinergic receptor channels, and the physiology and pathophysiology of purinergic receptors. Key Features: Organized and written by world-renowned experts; Covers state of the art experimental methods; Has broad appeal to basic and clinical scientists, the biotech industry, and pharmaceutical research companies.

GnRH: The Master Molecule of Reproduction Andrea C. Gore, 2013-03-09 Gonadotropin-releasing hormone (GnRH) cells are the key regulators of reproductive function in all vertebrate organisms. The GnRH molecule is synthesized in a small number of neurons in rostral hypothalamic regions of the brain. In mammals, these neurons release the GnRH decapeptide into the portal

capillary system leading to the anterior pituitary gland There GnRH causes the release of the gonadotropins luteinizing hormone LH and follicle stimulating hormone FSH which in turn act upon the gonads to stimulate their maturation and to cause synthesis of sex steroid hormones estrogen progesterone and testosterone Although each of the levels of the hypothalamic pituitary gonadal axis is critical for reproductive function GnRH neurons play the primary role in the control of reproductive maturation and adult reproductive function and may even play a role in reproductive senescence Since its discovery in 1970 there has been intense interest in GnRH producing neurons with more than 8000 papers and chapters in the last decade alone Despite this activity of research in basic and clinical science there has never been a book written specifically on GnRH neurons GnRH The Master Molecule of Reproduction aims to bring together the large and diverse literature of both laboratory and applied research that focuses on these unique cells This book will provide basic background into reproductive neuroendocrinology as well as specifics regarding the role of GnRH neurons in the control of reproduction Students studying endocrinology reproduction neuroendocrinology or molecular endocrinology will benefit from this book In addition this book will take a multi species approach which will be useful both to basic researchers as well as clinicians Whenever possible species differences and similarities will be presented and if possible studies on humans or the clinical relevance of basic research findings to humans will be discussed such as the treatment of reproductive disorders such as abnormalities in pubertal development or infertility

**The multitasking molecular chaperone Hsp60** Francesco Cappello, Everly Conway de Macario, Alberto JL Macario, 2024-10-19 The Multitasking Molecular Chaperone Hsp60 Structure Function and Impact on Health and Disease provides an overview of this key component of the Chaperone System CS The book covers various areas of medicine in which Hsp60 chaperonopathies have been identified Various chapters discuss the Hsp60 structure localization functions and participation in disease mechanisms both genetic and acquired focusing on humans but also presenting data obtained from pro and eukaryotic experimental models The main goal is to provide information accessible to all healthcare professionals in a way that can be understood by nonspecialists and that would stimulate clinical and pathological detection of Hsp60 chaperonopathies Molecular mechanisms are briefly described

with the purpose of illuminating roads toward accurate diagnosis treatment and patient monitoring Consequently the possibility of developing applying chaperonotherapy centered on Hsp60 as a therapeutic tool or target is analyzed in many sections of this book across a variety of medical specialties Over the last several years the importance of the CS as a physiological system has been brought to prominence and its roles in health and disease made clear The molecular chaperones including Hsp60 are the key components of the CS that are typically cytoprotective but they can also be etiopathogenic factors causing diseases named chaperonopathies Discusses strategies for diagnosis patient monitoring and treatment of disorders in which Hsp60 plays a role and can be used as biomarker and therapeutic target or agent Explains the fundamental biophysics genetics physiology and pathogenicity of Hsp60 Explores the mechanisms involving Hsp60 abnormalities causing disease including carcinogenesis inflammation autoimmunity and neurodegenerative disorders
