**Chemistry and Drug Design** G.A. Jeffrey, J.F. Piniella, 2012-12-06 In the past twenty years the X ray crystallography of organic molecules has expanded rapidly in two opposite directions One is towards larger and larger biological macromolecules and the other is towards the fine details of the electronic structure of small molecules Both advances required the development of more sophisticated methodologies Both were made possible by the rapid development of computer technology X ray diffraction equipment has responded to these demands in the one case by the ability to measure quickly many thousands of diffraction spectra in the other by providing instruments capable of very high precision Molecules interact through their electrostatic potentials and therefore their experimental and theoretical measurement and calculation is an essential component to understanding the electronic structure of chemical and biochemical reactions In this ASI we have brought together experts and their students from both the experimental and theoretical sides of this field in order that they better understand the philosophy and complexity of these two complementary approaches George A Jeffrey Department of Crystallography University of Pittsburgh Pittsburgh Pennsylvania 15260 USA vii CONTENTS LECTURES General Considerations on Methods for Studying Molecular Structures and Electron Density Distributions      **Medical and Health**
