The Politics of Equity Finance in Emerging Markets Kathryn C. Lavelle, 2004-10-14 Emerging market stock issuance relative to GDP rose in the late twentieth century to levels that roughly matched that of advanced industrial markets Nonetheless the connection between owning shares of emerging market stock and the ability to influence the management of these firms remains fundamentally different from the analogous institutional connection that has evolved in industrial markets The reasons for the differences in emerging markets are both historical and political in nature That is local equity markets have had the objective of providing for some degree of local ownership and control of large economic entities since the late nineteenth century However local markets have operated under different global political structures since that time ranging from imperialism to world wars to sovereign developmental states to neo liberal states Shares issued under these different structures have been reconfigured over time resulting in a lack of convergence along either the Anglo American or Continental models of corporate governance The author uses a political science paradigm to explain the growth of emerging equity markets She departs from conventional economic explanations and examines politics at the micro level of large issues of emerging market stock The second half of the book presents case studies dealing with emerging market countries in Latin

America Asia Russia and Eastern Europe Africa and the Middle East The case studies connect the regional state and firm levels to detail the multiple ownership and control arrangements and to dispel the notion that mere quantitative growth of these markets will lead to a convergence in financial institutional structures along the lines of the industrial core of the world economy

Changing Capitalisms? Glenn Morgan, Richard Whitley, Eli Moen, 2005-02-03 An increasing number of studies in the last decade or so have emphasized the viability and persistence of distinctive systems of economic coordination and control in developed market economies Over more or less the same period the revival of institutional economics and evolutionary approaches to understanding the firm has focused attention on how firms create distinctive capabilities through establishing routines that coordinate complementary activities and skills for particular strategic purposes For much of the 1990s these two strands of research remained distinct Those focusing on the institutional frameworks of market economies were primarily concerned with identifying complementarities between institutional arrangements that explained coherence and continuity On the other hand those focusing on the dynamics of firm behaviour studied how firms develop new capacities and are able to learn new ways of doing things This book aims to bring together these approaches It consists of a set of theoretically motivated and empirically informed chapters from a range of internationally known contributors to these debates In their chapters the authors show how institutions and firms evolve Ideas of path dependency and complementarity of institutions are subjected to critical scrutiny both by reference to their own internal logic and to empirical examples Varieties of institutional integration the surprising maintenance of deviant or alternative traditions and processes and the existence of unpredictable yet consequential policy options that can lead to breaks in path dependency are scrutinized with particular reference to how national and international firms may relate to institutions at various levels as a diverse arena of potential resources rather than as a singular and determinant constraining force The book provides a set of theoretical and empirical challenges for researchers concerned with the relationship between national institutional contexts and firm dynamics For those involved in teaching or studying at doctoral Masters and higher level undergraduate courses the book provides a structured entry into the debates about how institutions and firms are changing in the contemporary era

Income Inequality in Capitalist Democracies Vicki L. Birchfield, 2015-08-26 There has been much concern about rising levels of income inequality in the societies of advanced industrial democracies Commentators have attributed this increase to the impact of globalization the decline of the welfare state or the erosion of the power of labor unions and their allies among left wing political parties But little attention has been paid to variations among these countries in the degree of inequality This is the subject that Vicki Birchfield tackles in this ambitious book Differences in political institutions have been seen by political scientists as one likely explanation but Birchfield shows institutional variation to be only one part of the story Deploying an original conceptualization of political economy as applied democratic theory she makes the compelling case that cultural values particularly citizens attitudes about social justice and about the proper roles of the market and the

state need to be factored into any account that will provide an adequate explanation for the observable patterns To support her argument she brings to bear both multivariate statistical analyses and historical comparative case studies making this book a model for how quantitative and qualitative research can be effectively combined to produce more complete explanations of political and socioeconomic phenomena

The Myth of the Global Corporation Paul Doremus, William W. Keller, Louis W. Pauly, Simon Reich, 2021-01-12 Critics and defenders of multinational corporations often agree on at least one thing that the activities of multinationals are creating an overwhelmingly powerful global market that is quickly rendering national borders obsolete The authors of this book however argue that such expectations commonly rest on a myth They examine key activities of multinational corporations in the United States Japan and Europe and explore the relationship between corporate behavior and national institutions and cultures They demonstrate that the world's leading multinationals continue to be shaped decisively by the policies and values of their home countries and that their core operations are not converging to create a seamless global market With a wealth of fresh evidence the authors show that Japanese and German multinationals in particular remain only weakly committed to laissez faire policy orientations and continue to exhibit strong allegiance to national goals in such areas as investment and employment They also bring to light the consequences of enduring differences in government policies on for example industrial cartels capital markets and research and development The authors agree that the world economy is becoming more complex and integrated as overt barriers to trade and investment fall away But they conclude that the extent of this integration is decisively limited by structural divergence at the level of the firm The book will be essential reading for those seeking to understand the growing interdependence of still distinctive industrial societies and the wellsprings of the true global economy

On The Borders of State Power Martin Gainsborough, 2008-10-31 Covering the main themes of globalization state power and culture from the fifteenth to the twenty first century this book explores the changing nature meaning and significance of the Greater Mekong Sub region

Markets Neil Fligstein, 2018-06-05 Market societies have created more wealth and more opportunities for more people than any other system of social organization in history Yet we still have a rudimentary understanding of how markets themselves are social constructions that require extensive institutional support This groundbreaking work seeks to fill this gap to make sense of modern capitalism by developing a sociological theory of market institutions Addressing the unruly dynamism that capitalism brings with it leading sociologist Neil Fligstein argues that the basic drift of any one market and its actors even allowing for competition is toward stabilization The Architecture of Markets represents a major and timely step beyond recent largely empirical studies that oppose the neoclassical model of perfect competition but provide sparse theory toward a coherent economic sociology Fligstein offers this theory With it he interprets not just globalization and the information economy but developments more specific to American capitalism in the past two decades among them the 1980s merger movement He makes new inroads into the theory of fields which links the formation of markets and firms to the problems of stability His political cultural approach explains why governments remain crucial to markets and why so many national variations of capitalism endure States help make stable markets possible by for example establishing the rule of law and adjudicating the class struggle State building and market building go hand in hand Fligstein shows that market actors depend mightily upon governments and the members of society for the social conditions that produce wealth He demonstrates that systems favoring more social justice and redistribution can yield stable markets and economic growth as readily as less egalitarian systems This book will surely join the classics on capitalism Economists sociologists policymakers and all those interested in what makes markets function as they do will read it for many years to come **Political**
