Armed Conflict and Environmental Damage Dr. U C Jha,2014-08-01 Armed conflict and military activities have serious adverse impacts on the environment Modern weaponry troop movements landmines hazardous military waste and the destruction of forests for military use are a few sources of harm to the environment both during armed conflict and peacetime military activities Ecological assaults in combat areas are often kept a secret by the government resulting in even greater humanitarian and environmental harm Environmental degradation is increasingly being recognized as one of the most significant challenges of the 21st century and its effects are being felt worldwide Both domestic and international legislations have been inadequate in mitigating the impact of military activities

This book provides details of the environmental destruction wreaked during international and non international armed conflicts and argues that the existing legal regime for the protection of the environment during armed conflict requires substantial modification. It puts forward the view that though it is inconceivable to impose an absolute ban on environmental damage during military operations strengthening and clarifying the existing laws protecting the environment in times of conflict and enforcing environment friendly practices among military forces could go a long way in protecting natural assets of our earth.

Weapons of War: Environmental Impact, 2013-08-15 The Indian Air Force from a humble beginning in 1932 with 4 Wapiti aircraft six Indian officers and 22 hawai sepoys have traversed a long journey of eighty one years and crossed noteworthy milestones to become the fourth largest air force in the world. While facing several limitations challenges IAF have met all the national defence requirements and made several strategic contributions. With growing economic interests and national aspirations expanding interests well beyond our territorial boundaries and prevailing internal security challenges India's national defence requirements are also increasing. The first Gulf War was a monumental turning point in the war time employment of aerospace power. Ever since significance of aerospace power in war crisis and peace time has been gaining ascendancy. Kosovo and Libya are the two pertinent examples of the allies virtually relying on aerospace power without committing any soldiers on the ground. Scrutiny of the emerging global and national trends suggests that employment of the aerospace assets as well as nation's expectation from the IAF will continue to rise. Alongside there is an unplanned fall in flying platforms weapon systems and pilot strength of the IAF. This study is an attempt to analyse the history of the IAF in war as well as other than war operations to appreciate the emerging trends in geopolitics aerospace technology and doctrine and to identify the likely challenges IAF would be facing in the next two decades and beyond. Road map for transformation of the national security framework indigenous aerospace industry and the IAF has also been suggested.

Drought and Aquatic Ecosystems P. Sam Lake, 2011-06-09 Droughts are a major hazard to both natural and human dominated environments and those especially of long duration and high intensity can be highly damaging and leave long lasting effects. Water and Food Security in the Arabian Gulf The Emirates Center for Strategic Studies and Research, 2018-10-10 Growing populations and economies have led to an increase in water demand around the globe However there are large variations in the amounts of water available to nations and regions and growing concern surrounding the uncertainty associated with these supplies due in large part to natural and human impacts on the water cycle The need for alternative sources of fresh water has also been

aggravated by the large influx of guest workers and significant improvements in the quality of life among Gulf populations. Therefore supplies are augmented by alternative sources mainly desalinization which meets most of the needs of these countries. However this comes at a great financial cost as it is an extremely energy intensive process and has associated security risks but many still see desalination as the only viable means of ensuring water supply in the region. Global food security also faces an uncertain future. The Gulf states suffer from a substantial food gap and all the countries of the region are net food importers. The increase in the region's population, rising income levels and harsh weather conditions that prevent the increase of local food production have resulted in a vast increase in the region's food imports. The ECSSR 17th Annual Conference Water and Food Security in the Arabian Gulf held at the Center on March 26-27 2012 in Abu Dhabi and the resultant papers contained in this volume provide a detailed investigation of the food and water security challenges facing the region. They explore water and food resource management strategies and policies in the Gulf states, the global geopolitics of water security, future demand trends in the Arabian Gulf region and the particular challenges faced by the UAE in ensuring a reliable supply of food and water in the coming decades.

Alexander B Murphy, University of Oregon. The SAGE Handbook of Geographical Knowledge is a critical inquiry into how geography as a field of knowledge has been produced, reproduced and reimagined. It comprises three sections on geographical orientations, geography's venues and critical geographical concepts and controversies. The first provides an overview of the genealogy of geography. The second highlights the types of spatial settings and locations in which geographical knowledge has been produced. The third focuses on venues of primary importance in the historical geography of geographical thought. Orientations includes chapters on Geography: the Genealogy of a Term; Geography's Narratives and Intellectual History; Geography's Venues includes chapters on Field, Laboratory, Observatory, Archive, Centre of Calculation, Mission Station, Battlefield, Museum, Public Sphere, Subaltern Space, Financial Space, Art Studio, Botanical, Zoological, Gardens, Learned Societies. Critical concepts and controversies includes chapters on Environmental Determinism, Region, Place, Nature and Culture, Development, Conservation, Geopolitics, Landscape, Time Cycle of Erosion, Time, Gender, Race, Ethnicity, Social Class, Spatial Analysis, Glaciation, Ice Ages, Map, Climate Change, Urban, Rural.
