HPLC of Polymers Harald Pasch, Bernd Trathnigg, 2012-12-06 Polymers are mainly characterized by molar mass chemical composition functionality and architecture The determination of the complex structure of polymers by chromatographic and spectroscopic methods is one of the major concerns of polymer analysis and characterization This lab manual describes the experimental approach to the chromatographic analysis of polymers Different chromatographic methods their theoretical background equipment experimental procedures and applications are discussed The book will enable polymer chemists physicists and material scientists as well as students of macromolecular and analytical science to optimize chromatographic conditions for a specific separation problem Special emphasis is given to the description of

applications for homo and copolymers and polymer blends **Biotransformations** K. Faber, 2000-02-14 Whereas the hydrolases such as proteases esterases and lipases are sufficiently well researched to be applied in every standard laboratory other types of enzymes are still waiting to be discovered with respect to their applicability in organic chemistry transformations on a preparative scale This latter point is stressed here with the focus on the newcomer enzymes which show great synthetic potential **Biosynthesis** F.J. Leeper, J.C. Vederas, 2000-02-14 Concerned with discovering the chemical pathways of biosynthesis this book devotes four chapters to the use of isotopes in biosynthetic research and the biosynthesis of enzyme cofactors and vitamin B12 and of reduced polyketides such as erythromycin The topics covered demonstrate the revolution that has occurred in biosynthetic studies with the advent of gene cloning and overexpression Yet the book also shows that the more classical approach to biosynthetic studies must go hand in hand with these new techniques

Metal Sites in Proteins and Models H.A.O. Hill, P.J. Sadler, A.J. Thomson, 1999-04-01 Biological chemistry is a major frontier of inorganic chemistry. Three special volumes devoted to Metal Sites in Proteins and Models address the questions: how unusual are metal sites in metalloproteins and metalloenzymes compared to those in small coordination complexes and if they are special, how do polypeptide chains and co-factors control this? The chapters deal with iron with metal centres acting as Lewis acids, metals in phosphate enzymes with vanadium, and with the wide variety of transition metal ions which act as redox centres. They illustrate in particular how the combined armoury of genetics and structure determination at the molecular level are providing unprecedented new tools for molecular engineering.

Microsystem Technology in Chemistry and Life Sciences Andreas Manz, 1999-04 WHAT DOES NOT NEED TO BE BIG WILL BE SMALL a word by an engineer at a recent conference on chips technology. This sentence is particularly true for chemistry. Microfabrication technology emerged from microelectronics into areas like mechanics and now chemistry and biology. The engineering of micron and submicron sized features on the surface of silicon, glass, and polymers opens a whole new world. Micromotors smaller than human hair have been fabricated and they work fine. It is the declared goal of the authors to bring these different worlds together in this volume. Authors have been carefully chosen to guarantee for the quality of the contents. An engineer, a chemist, or a biologist

will find new impulses from the various chapters in this book **Methods for Affinity-Based Separations of Enzymes and Proteins** Munishwar N. Gupta, 2002-04-01 One major concern of biotechnology is either using enzymes or producing them Enzyme protein production is therefore an important starting point for biotechnology Bioseparation or Downstream Processing constitutes about 40-90% of the total production cost Driven by economics highly selective technologies applicable to large scale processing have emerged during the last decade These technologies are slowly diffusing to enzymologists who are working on a smaller scale looking for fast and efficient purification protocols The affinity based techniques including precipitation two phase extractions expanded bed chromatography perfusion chromatography and monoliths described in this volume provide current and new cutting edge methods Consequently the book is of main interest to researchers in biochemistry biochemical engineering and biotechnology working either in academic or industrial sectors
