Gregory R. Pohl, Robert A. Cannings, Jean-François Landry, David G. Holden, Geoffrey G. E. Scudder, 2015 Moths and butterflies Lepidoptera are one of the most diverse and economically important groups of insects with approximately 157 000 species worldwide This book establishes a definitive list of the species that occur in BC and clarifies erroneous records in past works It provides a knowledge baseline that will be useful to resource and conservation managers biodiversity researchers taxonomists amateur collectors and naturalists Back cover

Atlas of Neotropical Lepidoptera John B. Heppner, 1984-08 This checklist does not supercede any other because it is the first of its kind for the Neotropical region It represents the culmination of several years preparation by the contributing authors and editor following the initiation of the Atlas project in the autumn of 1978 The collaborators to the project continue their work either for Atlas fascicles or for the more immediate completion of the remaining five parts of the checklist The goal of the project is to provide a foundation work on the Neotropical Lepidoptera illustrated to the extent possible and encompassing a detailed text covering the basic data known for each described species original citation synonymy diagnosis range flight period and hosts New species will be described as each author finds useful but the primary purpose is initially to document all the species already known Efforts to document the Lepidoptera faunas of individual countries in Latin America are relatively illogical since in most cases upwards of 80% of the entire Neotropical fauna is represented in each country having tropical forest and thus such works would have to deal with most of the continental fauna The Atlas project covers the entire region to begin with but as a cooperative project among all New World nations
