

# How do we see things?

An object that gives out light is described as **luminous**.  
How does light from a luminous object such as a light bulb reach the eye?

Light travels in a straight line directly into the eye.

An object that does not give out light is **non-luminous**.  
How does your eye see a non-luminous object such as a comb?

Light hits the comb and some of it is reflected into the eye.
