 Medrano,Rafael Hernández,2015-04-28 Demographic changes due to improved life expectancy and access to medical care  
 has increased the number of people aged 65 years and beyond This raises an important new challenge for healthcare  
 professionals Changes in organ functions homeostatic mechanisms and receptor responsiveness impair drug distribution  
 metabolism and excretion and reduce the effectiveness of medicines among geriatric patients As a consequence management  
 of medical regimens is much more challenging in the elderly than in younger adult patients Elderly patients are also more  
 susceptible than other age groups to certain drug drug interactions drug disease interactions and adverse drug reactions  
 owing to the number of drugs administered Polypharmacy and potentially inappropriate medication is a common finding in  
 the elderly healthcare and it is considered a public health issue related to morbidity mortality and health care resource use  
 Psychopharmacological Issues in Geriatrics can be regarded as a pharmacovigilance manual for elderly patients as it  
 presents recommendations for geriatric prescription with specific considerations The book also provides a comprehensive  
 review of specific classes of psychopharmacological agents used to treat geriatric patients including antipsychotics  
 anxiolytics hypnotics and mood stabilizers The book is intended as a handbook for general medical and nursing practitioners
