Classification of Stars Carlos Jaschek, Mercedes Jaschek, 1990-07-26 The classification of stars into their various types is one of the fundamental areas of astronomy This book is a comprehensive handbook on the tools methods and results of stellar taxonomy Although this subject is firmly rooted in classical astronomy vast improvements in observational techniques have transformed the subject and greatly broadened the wavelength regions available for study The first six chapters describe modern methods of spectroscopic and photometric classification The remaining nine chapters describe particular families of stars progressing from the hottest to the coolest Within each category a description is given of the normal type and all the peculiar stars Throughout the emphasis is on the phenomenology of classification rather than the underlying astrophysics Both authors have devoted themselves to developing the international centre for stellar data at Strasbourg which uniquely qualifies them to write this definitive handbook for professional astronomers

Enchantment Of Urania, The: 25 Centuries Of Exploration Of The Sky Massimo Capaccioli, 2024-03-19 Today we know much about the sky how stars are born how they live and die and how the universe as a whole evolves We have learned of the existence of another type of matter indifferent to light and yet decisive for the formation of galaxies and we have a hint of a dark energy that since the last 4 5 billion years has taken over the control of the cosmos We postulated and then discovered and even photographed black holes and listened to the faint rustle of the space time ripple produced when these monsters devour each other We reached these astonishing

results recognized by a bunch of Nobel Prizes and filling every day the media with wonders for the eyes and the mind by the marriage of physics and astronomy that unified the Earth with the sky and then by the leap forward of science and technology in the Twentieth Century This rich heritage has ancient roots It was built by accumulating discoveries with errors observations with fantasies myths and superstitions with flashes of genius over a span of millennia since Homo sapiens turning his eyes to the immutable and perfect sky began to ask questions The book is a narration of the answers to these questions that had evolved over time a progressive path inserted in the general history with some second thoughts and many obstacles This is a saga of men and machines where greatness sometimes mixes with misery and passion often borders on sacrifice and even martyrdom Why should we know it Because our current knowledge is the result of these efforts and of the preconceptions that accompanied them The challenge has been to present this complex and intricate subject without resorting to any formulas so that it can be accessible to a wide audience of curious people including high school and university students and in general all those who normally keep themselves informed of scientific things A rich bibliography has also been added in the appendix for those wishing to learn more on one or more topics
