*Looking at looking* Theodore E. Parks,Irvin Rock,2000-09-06 This volume brings together a selection of the most influential current thinkers in the area of visual perception We are often confused by our visual systems for example size distortions but there is an underlying intelligence to our visual system even in the face of what would seem to be short circuits within our sensory processing This book explores varying views of this intelligence *Looking at Looking* Theodore E. Parks,2008-11 Many of the most captivating phenomena and ideas within the field of perception revolve around the question of the intelligence or not of vision Written by some of the field s top professionals Looking at Looking makes these readily available to new upper division students as a compelling answer to the question Why study perception *Perception* ,2001 The Eye's Intelligence: Unraveling the Mysteries of Vision and Image Processing Pasquale De Marco,2025-05-20 In *The Eye s Intelligence Unraveling the Mysteries of Vision and Image Processing* we embark on an enthralling journey into the realm of human vision exploring the intricate mechanisms that allow us to perceive and comprehend the world around us This comprehensive guide unveils the wonders of our visual system shedding light on the remarkable processes that transform light into meaningful images Delve into the depths of the eye s anatomy dissecting its intricate components and understanding their roles in capturing and transmitting visual information Witness the marvel of transduction the extraordinary conversion of light into electrical signals setting the stage for the brain s interpretation of the visual world Encounter the fascinating world of neurons the microscopic messengers that carry visual data along intricate pathways allowing us to perceive shapes colors and movement with breathtaking precision Unravel the secrets of color perception uncovering the mechanisms that allow us to distinguish between hues and shades creating a vibrant tapestry of visual experiences Explore the complexities of color vision deficiencies revealing the diverse ways in which individuals perceive the colorful world around them highlighting the remarkable adaptability of our visual system Discover the intricacies of motion perception the dance of objects through space and time Decipher the mechanisms that allow us to detect and interpret movement from the smooth pursuit of a flying bird to the dizzying spin of a whirling dervish Explore the intricate interplay between motion and depth perception revealing how our brains construct a three dimensional understanding of the world allowing us to navigate our surroundings with ease and precision Delve into the realm of object recognition the cornerstone of visual processing Investigate the Gestalt principles the fundamental rules that govern our perception of objects as cohesive wholes and explore the role of context in shaping our recognition of familiar forms Uncover the mechanisms that allow us to recognize objects despite changes in size position or illumination highlighting the remarkable adaptability of our visual system Peer into the fascinating world of attention the spotlight of consciousness that selectively focuses on specific aspects of the visual scene Examine the mechanisms that allow us to allocate attentional resources filtering out irrelevant information and prioritizing the most salient stimuli Explore the captivating Cocktail Party Effect our ability to focus on a

*Associative Learning For A Robot Intelligence* John H Andrae, 1998-09-22 The explanation of brain functioning in terms of the association of ideas has been popular since the 17th century Recently however the process of association has been dismissed as computationally inadequate by prominent cognitive scientists In this book a sharper definition of the term association is used to revive the process by showing that associative learning can indeed be computationally powerful Within an appropriate organization associative learning can be embodied in a robot to realize a human like intelligence which sets its own goals exhibits unique unformalizable behaviour and has no hidden homunculi Some believe that artificial intelligence is undergoing a paradigm shift There are undoubtedly several competing ideas and ideals Neural networks and dynamic systems are offered as alternatives to the information processing and digital computer models of the brain One is asked to decide between symbolic and subsymbolic between algorithmic and nonalgorithmic and between information processing and interactive systems Even in the short distance travelled in this book associative learning is seen to embrace both sides of these dichotomies
