**Tidal Friction and the Earth's Rotation** Peter Brosche,2013-12-01 P Brosche The development of the ideas and

observational techniques related to the subject of our meeting Tidal friction and the Earth's rotation Bielefeld September 1977 is one of the most fascinating books not merely chapters of the modern history of science Its genealogical tree is as intricate as that of mankind itself There are dead ends and superfluous re discoveries Due to these circumstances and to the pure extent of the topic it is impossible to give more than a few highlights here The first relevant observational fact was discovered by the famous English astronomer E Halley in 1695 Berry 1961 He simply could not arrive at an agreement between ancient and recent eclipses using a constant mean angular motion of the Moon Instead he had to introduce an empirical acceleration term in the mean motion Known as the secular acceleration it has ever since been a most challenging subject of celestial mechanics and a main branch of the genealogical tree already mentioned In 1754 completely independently and almost certainly in ignorance of those specialists activities the German philosopher Kant established the idea of tidal friction as a decelerating mechanism for the rotation of the Earth Felber 1974 Although he made some errors in his rough computations the majority of the constitutive elements of his concept have survived to the present day Brosche 1977

of Asterix the Gallic know well that the only fear of people in Brittany is that the sky falls upon their head So it must have been a shock for them the fans of Asterix to learn that a horde of Physicists and Dynamicists some of them being actually Roman ils sont fous ces Romains invaded the bay of Saint Brieuc and spend a full week conjuring all the nastiness that the sky has in reserve revelling in the horrors hidden beyond the blue dome they talked with delight about asteroids comets and meteor streams they grinned at the idea of artificial satellites these pots and pans of space always ready to fall upon you some of them said strange things about the Moon the planets and evoked the rings of Saturn or of some other of their gods One evening a Roman from Pisa went as far as cornering some inhabitants in the large hut they used for their witchcraft and filled them with terror by describing the fate of the poor dinosaurs victims of a particularly nasty asteroid or was it a comet You will be surprized to learn that Bretons did not exact a spectacular revenge for these offenses On the contrary
