Making Of Cognitive Science Essays In Honor Of George Armitage Miller:

The Making of Cognitive Science William Hirst, 1988-04-29 Nineteen distinguished contributors provide essays about the development of cognitive science by colleagues of George A Miller a central figure whose own intellectual history is to a large extent a history of the field Each contributor was invited to write about the period in which each was most closely associated with Miller to try to recapture the intellectual climate of the time and to place retrospectively each successive research venture in its larger context Together the essays constitute a fascinating and readable personal account of the way in which an exciting new science has come into being **The Making of Cognitive Science** will be welcomed by a broad audience in the cognitive science community as well as by historians of psychology

Mind as Machine Margaret A. Boden, 2006 Cognitive science is among the most fascinating intellectual achievements of the modern era The quest to understand the mind is an ancient one But modern science has offered new insights and techniques that have revolutionized this enquiry Oxford University Press now presents a masterly history of the field told by one of its most eminent practitioners Psychology is the thematic heart of cognitive science which aims to understand human and animal minds But its core theoretical ideas are drawn from cybernetics and artificial intelligence and many cognitive scientists try to build functioning models of how the mind works In that sense Margaret Boden suggests its key insight is that mind is a very special machine Because the mind has many different aspects the field is highly interdisciplinary It integrates psychology not only with cybernetics AI but also with neuroscience and clinical neurology with the philosophy of mind language and logic with linguistic work on grammar semantics and communication with anthropological studies of cultures and with biological and A Life research on animal behaviour evolution and life itself Each of these disciplines in its own way asks what the mind is what it does how it works how it develops and how it is even possible Boden traces the key questions back to Descartes s revolutionary writings and to the ideas of his followers and his radical critics through the eighteenth and nineteenth centuries Her story shows how controversies in the development of experimental physiology neurophysiology psychology evolutionary biology embryology and logic are still relevant today Then she guides the reader through the complex interlinked paths along which the study of mind developed in the twentieth century Cognitive science covers all mental

phenomena not just cognition knowledge but also emotion personality psychopathology social communication religion motor action and consciousness In each area Boden introduces the key ideas and researchers and discusses those philosophical critics who see cognitive science as fundamentally misguided And she sketches the waves of resistance and acceptance on the part of the media and general public showing how these have affected the development of the field No one else could tell this story as Boden can she has been a member of the cognitive science community since the late 1950s and has known many of its key figures personally Her narrative is written in a lively swift moving style enriched by the personal touch of someone who knows the story at first hand Her history looks forward as well as back besides asking how state of the art research compares with the hopes of the early pioneers she identifies the most promising current work Mind as Machine will be a rich resource for anyone working on the mind in any academic discipline who wants to know how our understanding of mental capacities has advanced over the years

2004 Rumelhart Prize Special Issue Honoring John R. Anderson Robert Goldstone, 2013-11-19 This special issue of Cognitive Science honors the research and mentorship contributions of Dr John R Anderson the 2004 David E Rumelhart Prize recipient whose research has provided the field of cognitive psychology with comprehensive and integrative theories and has had a practical impact on educational practice in the classroom and on student achievement in learning mathematics The David E Rumelhart Prize is awarded annually to an individual or collaborative team making a significant contemporary contribution to the formal analysis of human cognition For three decades Dr Anderson has been engaged in a vigorous research program with the goal of developing a computational theory of mind The diverse articles in this issue feature work by Dr Anderson's students colleagues and collaborators illustrating that it is possible to impact education with rigorous stimulation of human cognition

institutionalization of History and Philosophy of Science as a distinct field of scholarly endeavour began comparatively early though not always under that name in the Australasian region An initial lecturing appointment was made at the University of Melbourne immediately after the Second World War in 1946 and other appointments followed as the subject underwent an expansion during the 1950s and 1960s similar to that which took place in other parts of the world Today there are major Departments at the University of Melbourne the University of New South Wales and the University of Wollongong and smaller groups active in many other parts of Australia and in New Zealand Australasian Studies in History and Philosophy of Science aims to provide a distinctive publication outlet for Australian and New Zealand scholars working in the general area of history philosophy and social studies of science Each volume comprises a group of essays on a connected theme edited by an Australian or a New Zealander with special expertise in that particular area Papers address general issues however rather

than local ones parochial topics are avoided Further more though in each volume a majority of the contributors is from Australia or New Zealand contributions from elsewhere are by no means ruled out Quite the reverse in fact they are actively encouraged wherever appropriate to the balance of the volume in question **An Invitation to Cognitive Science** Lila R. Gleitman,1995 **To Strengthen American Cognitive Science for the Twenty-first Century** ,1992
