The Making of the Broads. A Reconsideration of Their Origin in the Light of New Evidence. By J.M. Lambert ... and J.N. Jennings [and Others], Etc. [With Plates and Maps.]. NORFOLK BROADS., Joseph Newell Jennings, Joyce M. LAMBERT, 1960

The Wetlands Handbook, 2 Volume Set Edward Maltby, Tom Barker, 2009-07-23 Forty two chapters by international experts from a wide range of disciplines make *The Wetlands Handbook* the essential tool for those seeking comprehensive understanding of the subject. A departure from more traditional treatises, this text examines freshwater wetland ecosystem science from the fundamentals to issues of management and policy. Introductory chapters address the scope and significance of wetlands globally for communities, culture and biodiversity. Subsequent sections deal with processes underpinning wetland functioning, how wetlands work, their uses and values for humans and nature, their sensitivity to external impacts and how they may be restored. The text is illustrated by numerous examples emphasising functional and holistic approaches to wetland management, including case studies on the wise use and rehabilitation of wetlands in farmed, urban, industrial and other damaged environments, highlighting the long term benefits of multiple use. *The Wetlands Handbook* will provide an invaluable reference for researchers, managers, policy makers and students of wetland sciences.

Water management, communities and environment Hilde Greefs, Marjolein 't Hart, 2006 More so than in most other countries, water management was crucial in the Middle Ages and early modern era in the Low Countries, where both man and the changing ecological conditions strongly affected the landscape. Striking is the enormous variation in solutions to the water threat. The authors in this *Jaarboek voor Ecologische Geschiedenis* primarily focus on the interaction between society and the environment; social, political and social economic factors prove to explain why the solutions implemented were sometimes sustainable and sometimes not. The various case studies are introduced by Martin Reuss, a water management specialist from the United States.

Fluvial Geomorphology of Great Britain K.J. Gregory, 2012-12-06 *Fluvial Geomorphology of Great Britain* studies the development of river made land forms together with the associated fluvial processes. There are many sites of scientific interest and value throughout the UK. The GCR sites described in this volume represent the wide range of fluvial land forms in the UK and the accounts provide scientific descriptions of all the fluvial geomorphology sites in Britain selected for statutory nature conservation as SSSIs.

Beyond Pilgrim Souvenirs and Secular Badges Sarah Blick, 2007-07-08 Brian Spencer, former Keeper of the Museum of London, was a major scholar of medieval popular culture. He almost single handedly established the study of pilgrim souvenirs and secular badges. He defined what these objects were and ascertained their function, manufacture, style and iconography with a careful use of primary documents and intricate stylistic analysis. He identified every major souvenir and badge discovered in Great Britain during the last few decades. He also made prominent contributions to the field of seal matrices, gaming pieces and horse paraphernalia. What bound all of these interests together was his understanding that the study of these artefacts could shed light on the beliefs and practices of a large number of

people This is reflected in the frequency with which his work is cited This volume is a collection of essays written by those who worked with Brian directly and those with whom he corresponded Geomorphology in the Anthropocene Andrew S. Goudie, Heather A. Viles, 2016-10-10 The Anthropocene is a major new concept in the Earth sciences and this book examines the effects on geomorphology within this period Drawing examples from many different global environments this comprehensive volume demonstrates that human impact on landforms and land forming processes is profound due to various driving forces including use of fire extinction of fauna development of agriculture urbanisation and globalisation and new methods of harnessing energy The book explores the ways in which future climate change due to anthropogenic causes may further magnify effects on geomorphology with respect to future hazards such as floods and landslides the state of the cryosphere and sea level The book concludes with a consideration of the ways in which landforms are now being managed and protected Covering all major aspects of geomorphology this book is ideal for undergraduate and graduate students studying geomorphology environmental science and physical geography and for all researchers of geomorphology
