Ferry Services in Europe Funda Yercan, 2018-12-17 Published in 1999, this work is mainly related to ferry services and operations in a number of marketplaces in Europe. Ferry services in the Atlantic Arc, to the West, the Baltic Sea, to the North, and the Eastern Mediterranean, to the Southeast of Europe, are reviewed. Ferry markets in the Baltic area and the Mediterranean have been crucial markets in particular because of their continuing development, mostly after the post-communism changes in the East European countries and the civil war in the former Yugoslavia. Developments in the Atlantic Arc and the effects of the Channel Tunnel on the ferry market in that area are also explained, and conclusions and comments offered.

Following the exciting exploration of hot vent and cold seep ecosystems the rediscovery of cold water coral ecosystems with high technology instrumentation is currently another hot topic in multidisciplinary marine research. Conventionally coral reefs are regarded as restricted to warm and well illuminated tropical seas not associated with cold and dark waters of higher latitudes. However ongoing scientific missions have shed light on the global significance of this overlooked ecosystem. Cold water coral ecosystems are involved in the formation of large seabed structures such as reefs and giant carbonate mounds and they represent unexploited paleo environmental archives of earth history. Like their tropical cousins cold water coral ecosystems harbour rich species diversity. Despite the great water depths commercial interests overlap more and more with the coral occurrences. Human activities already impinge directly on cold water coral reefs causing severe damage to this vulnerable ecosystem. In this volume the current key institutions involved in cold water coral research have contributed 62 state of the art articles from geology and oceanography to biology and conservation.

The Future of Bluefin Tunas Barbara A. Block, 2019-08-06. The most thorough and current account of scientific research on bluefin tunas, the largest most sought after tunas in the world. Bluefin tunas are dominant keystone predators known for their impressive size, strength, endurance and speed. Electronic tags have revealed that they can dive to great depths over 6000 feet and migrate vast distances from frigid subpolar seas to warm tropical waters for spawning. Prized for their rich taste and unique texture, bluefin tunas are also a worldwide commodity of great value. However over the past few decades overfishing throughout their range has led to significant population reductions. In *The Future of Bluefin Tunas* Barbara A. Block brings together renowned bluefin experts from 15 different countries to share the latest information on the science, fisheries policy and management decisions related to each of the three species within the *Thunnus* group: Atlantic, Pacific and Southern. Synthesizing basic and applied research, the book delves into every aspect of these majestic fish, from their life history and genetic makeup to their ecology and migrations. Ichthyologists and marine scientists dedicated to the study of these fishes report on the latest stock assessments, explore the results of advances such as biologging and DNA sampling, and assess the potential of bluefin tuna aquaculture. *The Future of Bluefin Tunas* provides critical research findings to inform decisions that will impact tunas and the ocean ecosystems they affect. Scientists, fisheries managers, policymakers and marine conservationists will take away key data from this timely volume to help them ensure these remarkable fish continue in perpetuity.

The ocean is under increasing threat from the expansion of human activities The combined impacts of these threats as well as the potential impacts of climate change and ocean acidification have placed thousands of species at risk of extinction and have impaired the structure function productivity and resilience of marine ecosystems Currently some parts of the world's oceans are significantly impacted yet are without any form of effective management Only a small proportion of the oceans are within protected area systems Globally measures are being taken to increase protection and sustainable management but application is uncoordinated and not always effective In order to support effective policy action by countries and competent international and regional organizations it is critical to build a sound understanding of the most ecologically and biologically important ocean areas that support healthy marine ecosystems so that the necessary steps to ensure the long term function and resilience of these systems can be taken
