Philosophical Problems Of The Grunbaum:

Philosophical Problems of the Internal and External Worlds John Earman, Allen Janis, Gerald J. Massey, Nicholas Rescher, 2014-02-06 The inaugural volume of the Pittsburgh Konstanz series devoted to the work of philosopher Adolf Grünbaum encompasses the philosophical problems of space time and cosmology the nature of scientific methodology and the foundations of psychoanalysis

Philosophical Problems of Space and Time Adolf Grünbaum, 1963

Philosophical Problems of Space and Time Adolf Grünbaum, 2012-12-06 It is ten years since Adolf Grünbaum published the first edition of this book It was promptly recognized to be one of the few major works in the philosophy of the natural sciences of this generation In part this is so because Grünbaum has chosen a problem basic both to philosophy and to the natural sciences the nature of space and time and in part this is so because he so admirably exemplifies that Aristotelian devotion to the intimate and mutual dependence of actual science and philosophical understanding More than this however the quality of his work derives from his achievement in combining detail with scope The problems of space and time have been among the most difficult in contemporary and classical thought and Grünbaum has been responsible to the full depth and complexity of these difficulties This revised and enlarged second edition is a work in progress in the tradition of reflective analysis of modern science of such figures as Ehrenfest and Reichenbach In publishing this work among the Boston Studies in the Philosophy of Science we hope to contribute to and encourage that broad tradition of natural philosophy which is marked by the close collaboration of philosophers and scientists To this end we have published the proceedings of our Colloquia of meetings and conferences here and abroad as well as the works of single authors

The Philosophy of Psychology William O'Donohue, Richard F Kitchener, 1996-10-28 This major text provides the first comprehensive anthology of the key topics arising in the philosophy of psychology Bringing together internationally renowned authors including Herb Simon Karl Pribram Joseph Rychlak Ullin T Place and Adolf Grünbaum this volume offers a stimulating and informative addition to contemporary debate With the cognitive revolution of the 1960s there has been a resurgence of interest in the study of the philosophical assumptions and implications of psychology Several significant themes such as the foundations of knowledge behaviourism rationality emotion and cognitive science span both philosophy and psychology and are covered here along with a wide range of issues in the fields

Foundations of Space-Time Theories John Earman, Clark N. Glymour, John J. Stachel, 1977-11-25 Foundations of Space Time Theories was first published in 1977 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions The essays in this volume are based on the papers given at a conference on the philosophical aspects of the space time theory held under the auspices of the Minnesota Center for Philosophy of Science

Conceptual Change G.A. Pearce, P. Maynard, 2012-12-06 During Halloween of 1970 the Department of Philosophy of the University of Western Ontario held its annual fall colloquium at London Ontario The general topic of the sessions that year was conceptual change The thirteen papers composing this volume stem more or less directly from those meetings six of them are printed here virtually as delivered while the remaining seven were subsequently written by invitation The programme of the colloquium was to have consisted of major papers delivered by Professors Wilfrid Sellars Stephan Körner Paul Ziff and Hilary Putnam with shorter commentary thereupon by Professors Robert Binkley Joseph Ullian Jerry Fodor and Robert Barrett respectively And that is the way it happened with one important exception at the eleventh hour Sellars and Binkley exchanged roles This gave Binkley the rather unusual and challenging task of providing a suitable Sellarsian answer to a question not of his own asking for Binkley's paper was written under Sellars' original title Sellars' own contribution to the volume is perhaps more nearly what he would have presented as main speaker than a direct response to Binkley However it has seemed best on balance to attempt no further stylistic accommodation of the one paper to the other their mutual

philosophical relevance will be evident in any case The editors would here like to extend special thanks to both Sellars and Binkley for their extraordinary efforts under the circumstances

John von Neumann and the Foundations of Quantum Physics Miklós Rédei, Michael Stöltzner, 2013-03-09 John von Neumann 1903 1957 was undoubtedly one of the scientific geniuses of the 20th century The main fields to which he contributed include various disciplines of pure and applied mathematics mathematical and theoretical physics logic theoretical computer science and computer architecture Von Neumann was also actively involved in politics and science management and he had a major impact on US government decisions during and especially after the Second World War There exist several popular books on his personality and various collections focusing on his achievements in mathematics computer science and economy Strangely enough to date no detailed appraisal of his seminal contributions to the mathematical foundations of quantum physics has appeared Von Neumann's theory of measurement and his critique of hidden variables became the touchstone of most debates in the foundations of quantum mechanics Today his name also figures most prominently in the mathematically rigorous branches of contemporary quantum mechanics of large systems and quantum field theory And finally as one of his last lectures published in this volume for the first time shows he considered the relation of quantum logic and quantum mechanical probability as his most important problem for the second half of the twentieth century The present volume embraces both historical and systematic analyses of his methodology of mathematical physics and of the various aspects of his work in the foundations of quantum physics such as theory of measurement quantum logic and quantum mechanical entropy The volume is rounded off by previously unpublished letters and lectures documenting von Neumann's thinking about quantum theory after his 1932 Mathematical Foundations of Quantum Mechanics The general part of the Yearbook contains papers emerging from the Institute's annual lecture series and reviews of important publications of philosophy of science and its history

PSA 1970 R.C. Buck, Robert S. Cohen, 2012-12-06 This book contains the papers presented at the second biennial meeting of the Philosophy of Science Association held in Boston in Fall 1970 We have added the paper by Jaakko Hintikka which he was unable to present due to illness and we have

unfortunately not received the paper of Michael Scriven Otherwise these proceedings are complete so far as formal presentations The meeting itself was dedicated to the memory of Rudolf Carnap This great man and distinguished philosopher had died shortly before The five talks from the session devoted to recollections of Professor Carnap are printed at the beginning of this book and they are followed by eight other tributes and memories We are particularly grateful to Wolfgang Stegmüller for permitting us to include a translation of his eulogy which was broadcast in Germany The photographs were kindly contributed by Hannah Thost Carnap ROGER C BUCK Department of History and Philosophy of Science Indiana University ROBERT T S COHEN Boston Center for the Philosophy of Science Boston University Photograph by Francis Schmidt 1935 Photograph by Adya 1962 TABLE OF CONTENTS PREFACE v HOMAGE TO RUDOLF CARNAP XI Herbert Feigl Carl G Hempel Richard C Jeffrey W V Quine A Shimony Yehoshua Bar Hillel Herbert G Bohnert Robert S Cohen Charles Hartshorne David Kaplan Charles Morris Maria Reichenbach Wolfgang Stegmüller SYMPOSIUM THEORETICAL ENTITIES IN STATISTICAL EXPLANATION JAMES G GREENO Theoretical Entities in Statistical Explanation 3 WESLEY C SALMON Explanation and Relevance Comments on James G *Reconsidering Michael Polanyi's Philosophy* Stefania Ruzsits Jha, 2017-03-13 The chemist and philosopher Michael Polanyi 1891 1976 was one of the first twentieth century scientists to propose a program to resolve the internal conflict of the modern Enlightenment scientific detachment and moral nihilism with humanist values Stefania Jha's intellectual biography places Polanyi in the context of his time and culture analyzes his key philosophical ideas and explicates the application and at times misappropriation of his work Polanyi's method was not laid out in his published works and his vocabulary tends to make his writings difficult to understand By exposing the structure of his theory of tacit knowing and by tracing the growth of his thinking Jha shows how the various elements of his thought are integrated Through examination of his philosophical roots in Kant and the complexity of his evolving thought she counteracts the popular notion that Polanyi's philosophy stands apart from the western philosophic tradition Jha's deep analysis makes Polanyi's shift of focus from science to philosophy more intelligible his philosophy more approachable and the causes he championed such as the freedom of science and cultural freedom more understandable Applying his notion of tacit knowing in practical directions Jha seeks to bring the study of Polanyi's philosophy out of the specialists' enclave and into such fields as ethics and clinical medicine *Relativity and Geometry* Roberto Torretti, 2014-05-20 Relativity and Geometry aims to elucidate the motivation and significance of the changes in physical geometry brought about by Einstein in both the first and the second phases of relativity The book contains seven chapters and a mathematical appendix The first two chapters review a historical background of relativity Chapter 3 centers on Einstein's first Relativity paper of 1905 Subsequent chapter presents the Minkowskian formulation of special relativity Chapters 5 and 6 deal with Einstein's search for general relativity from 1907 to 1915 as well as some aspects and subsequent developments of the theory The last chapter explores the concept of simultaneity geometric conventionalism and a few other questions concerning space time structure

causality and time Collected Works, Volume I Adolf Grünbaum, 2013-07-16 Adolf Grünbaum is one of the giants of 20th century philosophy of science. This volume is the first of three collecting his most essential and highly influential work. The essays collected in this first volume focus on three related areas. They discuss scientific rationality, the problem of what it takes for a theory to be called scientific, and ask whether it is plausible to draw a clear distinction between science and non-science as was famously proposed by Karl Popper. They delve into the debate between determinism and indeterminism in both science and in the humanities. Grünbaum defends the position of the Humane Determinist, which then leads to a thorough criticism of the current theological approaches to ethics and morality where Grünbaum defends an explicit Secular Humanism as well as of prominent theistic interpretations of twentieth century physical cosmologies. The second volume is devoted to Grünbaum's writings on the Philosophy of Physics and Space Time, and the third to his lectures on the Philosophy of Psychology and Psychoanalysis, including his 1985 Gifford Lectures, which are to be published for the first time. *Frontiers of Science and Philosophy* Robert G. Colodny, 2010-11-23 Six essays by noted philosophers of science include the following topics: explanation in science and in history, philosophy and the scientific image of man, psychoanalysis and parapsychology, the conceptual basis of the biological sciences, the nature of time, and problems of microphysics. **Hans Reichenbach: Logical Empiricist** M.H. Salmon, 2012-12-06 Logical empiricism, not to be confused with logical positivism (see pp 40-44), is a movement which has left an indelible mark on twentieth century philosophy. Hans Reichenbach (1891-1953) was one of its founders and one of its most productive advocates. His sudden and untimely death in 1953 halted his work when he was at the height of his intellectual powers; nevertheless, he bequeathed to us a handsome philosophical inheritance. At the present time, twenty-five years later, we can survey our heritage and see to what extent we have been enriched. The present collection of essays constitutes an effort to do just that: to exhibit the scope and unity of Reichenbach's philosophy and its relevance to current philosophical issues. There is no Nobel Prize in philosophy; the closest analogue is a volume in *The Library of Living Philosophers*, an honor which, like the Nobel Prize, cannot be awarded posthumously. Among scientific philosophers, Rudolf Carnap, Albert Einstein, Karl Popper, and Bertrand Russell have been so honored. Had Reichenbach lived longer, he would have shared the honor with Carnap. For at the time of his death, a volume on Logical Empiricism, treating the works of Carnap and Reichenbach, was in its early stages of preparation. In the volume which emerged, Carnap wrote: "In 1953, when Reichenbach's creative activity was suddenly ended by his premature death, our movement lost one of its most active leaders." *Can Theories be Refuted?* Sandra Harding, 2012-12-06 According to a view assumed by many scientists and philosophers of science and standardly found in science textbooks, it is controlled experience which provides the basis for distinguishing between acceptable and unacceptable theories in science: acceptable theories are those which can pass empirical tests. It has often been thought that a certain sort of test is particularly significant: crucial experiments provide supporting empirical evidence for one theory while providing conclusive evidence against another. However, in 1906 Pierre Duhem argued that the

falsification of a theory is necessarily ambiguous and therefore that there are no crucial experiments one can never be sure that it is a given theory rather than auxiliary or background hypotheses which experiment has falsified w V Quine has concurred in this judgment arguing that our statements about the external world face the tribunal of sense experience not individually but only as a corporate body Some philosophers have thought that the Duhem Quine thesis gratuitously raises perplexities Others see it as doubly significant these philosophers think that it provides a base for criticism of the foundational view of knowledge which has dominated much of western thought since Descartes and they think that it opens the door to a new and fruitful way to conceive of scientific progress in particular and of the nature and growth of knowledge in general

Geometry and Chronometry in Philosophical Perspective Adolf Grünbaum, 1968 In this volume Professor Grünbaum substantially extends and comments upon his essay Geometry Chronometry and Empiricism which was first published in Volume III of the Minnesota Studies in the Philosophy of Science Commenting on the essay when it first appeared J J C Smart wrote in Mind England In my opinion Adolf Grünbaum's paper supersedes nearly all that has been written on the logical status of physical geometry and chronometry The full text of the essay is given here with the author's extension of it and his discussion of some of the critical comment it has evoked particularly a critique published by Hilary Putnam Adolph Grünbaum is Andrew Mellon Professor of Philosophy at the University of Pittsburgh and the current president of the Philosophy of Science Association
