the life and accomplishments of the Swiss philosopher and musician who contributed to the Enlightenment      The Interdependence of Teaching and Learning Bryant Griffith, Douglas J. Loveless, 2013-03-01 The varied chapters of this book seek to capture the complexities of teaching and learning in today's schools and they share an interest in exploring the influences of knowledge construction in the moment and over time Teaching and learning are human processes interrelated and dynamic We assembled this collection to unpack what it means to teach and to learn teasing out some of the implications and challenges of such complicated educational processes that are often misconstrued as causal or linear As educators currently residing in the United States we find this a particularly pressing agenda given the current focus on common core standards and reducing teaching and learning to conceptual and pedagogical step by step procedures Our primary concern in putting together this book was to provide a conceptual and political foundation from which to construct and defend understandings and practices of teaching and learning that embody the complexity of educational endeavors and relationships The isolation of teaching from learning and the othering of both teachers and students one from the other suggests that knowledge is synonymous with information This book challenges such assumptions The project underlying this text can be seen as a means of rethinking how teachers and students perspectives of practice and curriculum influence what learning opportunities are provided to students Chapters written by established and new thinkers in the field of education demonstrate the ways in which teachers reformulate relationships between teaching and learning in school settings Our second objective is to examine local constructions of knowledge over time and how those constructions are consequential for teacher and student learning By examining patterns of practice and processes of knowledge construction in elementary secondary and undergraduate classrooms the authors of these chapters lay a foundation for examining commonalities and differences in the construction of knowledge and practices across educational levels disciplines and in school and out of school settings      Teaching Young Children: Choices In Theory And Practice Mac Naughton, Glenda, Williams, Gillian, 2008-11-01 This book presents early childhood students and staff with a broad and diverse range of teaching techniques to support children's learning It examines 26 techniques ranging from simple ones such as describing and listening to more complex methods such as deconstruction and scaffolding The strategies selected are derived from the best current research knowledge about how young children learn A detailed evaluation of each strategy enables childcare staff early childhood teachers and students to expand their repertoire of teaching strategies and to critically evaluate their own teaching in early childhood settings Vignettes and examples show how early childhood staff use the techniques to support children's learning and help to bring the discussion of each technique to life Revised and updated in light of the latest research new features include Coverage of the phonics debate Addition of ICT content Questions for further discussion Revision to the chapter on problem solving Updated referencing throughout Teaching Young Children is key reading for students and experienced early childhood staff working in diverse settings with young children      **Của Hiệu Triết Học**
