Philosophy Of Biology Today:

Philosophy of Biology Today Lucyle T Werkmeister Professor of Philosophy and Director of the Program in the History and Philosophy of Science Michael Ruse, Robert J. Richards, Michael Ruse, 1988-01-01 As molecular biologists peer ever more deeply into life's mysteries there are those who fear that such reductionism conceals more than it reveals and there are those who complain that the new techniques threaten the physical safety of us all As students of evolution apply their understanding to our own species some people think that this is merely an excuse for racist and sexist propaganda and others worry that the whole exercise blatantly violates the religious beliefs many hold dear These controversies are the joint concerns of biologists and philosophers of those whose task it is to study the theoretical and moral foundations of knowledge From publisher description

The Philosophy of Biology David L. Hull, Michael Ruse, 1998 The aim of this series is to bring together important recent writings in major areas of philosophical inquiry selected from a variety of sources mostly periodicals which may not be conveniently available to the university student or the general reader The editors of each volume contribute an introductory essay on the items chosen and on the questions with which they deal A selective bibliography is appended as a guide to further reading The philosophy of biology today is one of the most exciting areas in philosophical inquiry Drawing on work of the past decade this volume brings together articles from the philosophy history and sociology of science as well as many branches of the biological sciences to consider issues including the nature of evolutionary theory biology and ethics the challenge from religion and the social implications of biology today in particular the Human Genome Project The 36 articles in this collection are divided into 10 parts each with an introduction by the editors Spanning issues from epistemology across to ethics the volume delves into the latest theoretical controversies as well as burning questions of contemporary social importance Throughout the volume an attempt is made to offer positions from different perspectives so that the reader will be challenged as well as informed The Philosophy of Biology will be essential and fascinating reading for students of philosophy and biology as well as the general reader with an interest in the natural sciences and evolution

Foundations of Biophilosophy Martin Mahner, Mario Bunge, 2013-03-14 Over the past three decades the philosophy of biology has emerged from the shadow of the philosophy of physics to become a respectable and thriving philosophical subdiscipline The authors take a fresh look at the life sciences and the philosophy of biology from a strictly realist and emergentist naturalist perspective They outline a unified and science oriented philosophical framework that enables the clarification of many foundational and philosophical issues in biology This book will be of interest both to life scientists and philosophers

The Nineteenth Century C. L. Ten, 1994 The Nineteenth Century provides a broad scholarly introduction to nineteenth century philosophy It also contains a glossary of philosophical terms and a chronological table of philosophical and cultural events

Evolutionary Biology Michael T. Clegg, Max K. Hecht, Ross J. MacIntyre, 2012-12-06 After volume 33 this book series was replaced by the journal Evolutionary Biology Please visit www.springer.com/11692 for

further information The nature of science is to work on the boundaries between the known and the unknown These boundaries shift as new methods are developed and as new concepts are elaborated e g the theory of the gene or more recently the coalescence framework in population genetics These tools allow us to address questions that were previously outside the realm of science and as a consequence the boundary between the knowable and unknowable has shifted A study of limits should reveal and clarify the boundaries and make sharper the set of questions This book examines and analyzes these new limits as they are applied to evolutionary biology and population genetics It does this by framing the analysis within four major classes of problems establishing the fact of evolution understanding the evolutionary pathways that led to today s biological world mechanisms of evolutionary change e g models of social behavior sexual selection macro evolution and finally prediction

Knowledge of Life Today Jean Gayon, Victor Petit, 2019-04-30 Knowledge of Life Today presents the thoughts of Jean Gayon a major philosopher of science in France who is recognized across the Atlantic especially for his work in philosophy and the history of life sciences The book is structured around Gayon s personal answers to questions put forward by Victor Petit This approach combines scientific rigor and risk taking in answers that go back to the fundamentals of the subject As well as the relationship between philosophy and the history of science Gayon discusses the main questions of the history and philosophy of biology that marked his intellectual journey Darwin evolutionary biology genetics and molecular biology human evolution and various aspects of the relationship between biology and society in contemporary times racism eugenics biotechnology biomedicine etc

Phenomenology of Life and the Human Creative Condition Anna-Teresa Tymieniecka, 1997-12-31 Self individualization has been interpreted as the process in which the all embracing Self unfolds into an infinite variety of different individuals plants animals and men A comparison of the different ways in which the Self manifests itself in the biological and psychological developmental processes or in a visionary image of the undivided Self reveals the same basic structure of expression The Self the one is represented by a circular domain and comprises a basic inner duality the two creating a paradox of conflicting opposites In the undivided Self the two give rise to a trinity in which however a quaternity is hidden The latter expresses itself in this world as the four basic forces the four Elements or the four main archetypes specifying the possibilities or development in space and time Self individualization starts with the first appearance of a primary structure of an individual sub Self This is the fifth basic force the fifth Element Further development is characterized by four generative principles 1st the principle of wholeness connection and integration being oriented to remaining whole or restoring wholeness 2nd the principle of complementarity and compensation a periodic shift between opposing influences 3rd the

enstructing principle causing the relative stability of the spatial appearance of the manifest structure and 4th the principle of gesture resulting in a gradual stepwise development of that structure into a full grown individual

Conceptual Issues in Modern Human Origins Research Geoffrey A. Clark, Catherine M. Willermet, While those who study human origins now agree that the evolution of modern human form extends back much further in time than the evolution of modern human behavior they disagree sharply as to how to interpret the substantive data Two fundamentally incommensurate interpretations of our origins the Replacement camp and the Continuity camp have now emerged out of pre existing models and theories that go back to the last quarter of the 19th century This book contends that these positions are based on radically different biases and assumptions about what the remote human past was like The purpose of this volume is to examine those conceptual differences not to arrive at a consensus but rather to explore the reasons why a consensus might never be possible

Revisioning Transpersonal Theory Jorge N. Ferrer, 2002-01-01 A participatory alternative to the perennialism and experientialism dominant in transpersonal psychology

Evolutionary Biology R. Paul Thompson, Denis Walsh, 2014-03-13 This volume explores the philosophical and biological richness of twenty first century evolution its concepts methods structure and religious implications

Whitehead at Harvard, 1924-1925 Henning Brian G. Henning, 2019-11-27 In these newly commissioned essays leading Whitehead scholars ask a range of important questions about Whitehead's first year of philosophy lectures Do these lectures challenge or confirm previous understandings of Whitehead's published works What is revealed about the development of Whitehead's thought in the crucial period after London but before the publication of *Science and the Modern World* What should we make of concepts and terms that were introduced in these lectures but were never incorporated into subsequent publications Also included is the text of Whitehead's first lecture at Harvard recently gifted to the Critical Edition allowing for a clearer understanding of Whitehead's plans and goals for his first course of lectures in philosophy than has previously been possible

The Problems of Jurisprudence Richard A. Posner, 1993-03-15 Here one of America's most distinguished scholar judges shares with us his vision of the law Posner argues for a pragmatic jurisprudence one that eschews formalism in favor of the factual and the empirical Laws he argues are not abstract sacred entities but socially determined goads for shaping behavior to conform with society's values

Levels of Organic Life and the Human Helmuth Plessner, 2021-05-20 The groundbreaking classic of twentieth century German philosophy now available in English with an introduction by J M Bernstein Helmuth Plessner's *Levels of Organic Life and the Human* draws on phenomenological biological and social scientific sources to offer a systematic account of nature life and human existence The book considers non living nature plants non human animals and human beings a sequence of increasingly complex modes of boundary dynamics simply put interactions between a thing's insides and the surrounding world Living things are classed and analyzed by their positionality or orientation to and within an environment According to Plessner's radical view the human form of life is excentric that is the relation between body and environment is something to

which humans themselves are positioned and can take a position This excentric positionality enables human beings to take a stand outside the boundaries of their own body a possibility with significant implications for knowledge culture religion and technology A powerful and sophisticated account of embodiment the Levels shows with reference both to science and to philosophy how life can be seen on its own terms to establish its own boundaries and how from the standpoint of life the human establishes itself in relation to the nonhuman As such the book is not merely a historical monument but a source for invigorating a range of vital current conversations around the animal posthumanism the material turn and the biology and sociology of cognition

Philosophical Darwinism Peter Munz, 2002-11 Examines knowledge in the light of biology and in particular Darwin's theory of natural selection Munz argues that the acquisition of knowledge is continuous right from the protozoa to the most advanced scientific theories

Keywords in Evolutionary Biology Evelyn Fox Keller, Elisabeth Anne Lloyd, 1992 In science more than elsewhere a word is expected to mean what it says nothing more nothing less But scientific discourse is neither different nor separable from ordinary language meanings are multiple ambiguities ubiquitous Keywords in Evolutionary Biology grapples with this problem in a field especially prone to the confusion engendered by semantic imprecision Written by historians philosophers and biologists including among others Stephen Jay Gould Diane Paul John Beatty Robert Richards Richard Lewontin David Sloan Wilson Peter Bowler and Richard Dawkins these essays identify and explicate those terms in evolutionary biology which though commonly used are plagued by multiple concurrent and historically varying meanings By clarifying these terms in their many guises the editors Evelyn Fox Keller and Elisabeth Lloyd hope to focus attention on major scholarly problems in the field problems sometimes obscured sometimes reveals and sometimes even created by the use of such equivocal words Competition adaptation and fitness for instance are among the terms whose multiple meaning have led to more than merely semantic debates in evolutionary biology Exploring the complexity of keywords and clarifying their role in prominent issues in the field this book will prove invaluable to scientists and philosophers trying to come to terms with evolutionary theory it will also serve as a useful guide to future research into the way in which scientific language works

Darwinian Dynamics Richard E. Michod, 2021-01-12 The concept of fitness has long been a topic of intense debate among evolutionary biologists and their critics with its definition and explanatory power coming under attack In this book Richard Michod offers a fresh dynamical interpretation of evolution and fitness concepts He argues that evolution has no enduring products what matters is the process of genetic change Whereas many biologists have focused on competition and aggression as determining factors in survival Michod by concentrating on the emergence of individuality at new and more complex levels finds that cooperation plays even a greater role Michod first considers the principles behind the hierarchically nested levels of organization that constitute life genes chromosomes genomes cells multicellular organisms and societies By examining the evolutionary transitions from the molecular level up to the whole organism the author explains how cooperation and conflict in a multilevel setting leads to new levels of fitness He builds a

model of fitness drawing on recent developments in ecology and multilevel selection theory and on new explanations of the origin of life Michod concludes with a discussion of the philosophical implications of his theory of fitness a theory that addresses the most fundamental and unique concept in all of biology

Of Minds and Molecules Nalini Bhushan, Stuart Rosenfeld, 2000-12-14 Of Minds and Molecules is the first anthology devoted exclusively to work in the philosophy of chemistry The essays written by both chemists and philosophers adopt distinctive philosophical perspectives on chemistry and collectively offer both a conceptualization of and a justification for this emerging field

Biological Individuality Scott Lidgard, Lynn K Nyhart, 2017-05-24 Individuals are things that everybody knows or thinks they do Yet even scholars who practice or analyze the biological sciences often cannot agree on what an individual is and why One reason for this disagreement is that the many important biological individuality concepts serve very different purposes defining classifying or explaining living structure function interaction persistence or evolution Indeed as the contributors to Biological Individuality reveal nature is too messy for simple definitions of this concept organisms too quirky in the diverse ways they reproduce function and interact and human ideas about individuality too fraught with philosophical and historical meaning Bringing together biologists historians and philosophers this book provides a multifaceted exploration of biological individuality that identifies leading and less familiar perceptions of individuality both past and present what they are good for and in what contexts Biological practice and theory recognize individuals at myriad levels of organization from genes to organisms to symbiotic systems We depend on these notions of individuality to address theoretical questions about multilevel natural selection and Darwinian fitness to illuminate empirical questions about development function and ecology to ground philosophical questions about the nature of organisms and causation and to probe historical and cultural circumstances that resonate with parallel questions about the nature of society Charting an interdisciplinary research agenda that broadens the frameworks in which biological individuality is discussed this book makes clear that in the realm of the individual there is not and should not be a direct path from biological paradigms based on model organisms through to philosophical generalization and historical reification

Science and the World's Religions Patrick McNamara Ph.D., Wesley J. Wildman, 2012-07-19 This trio of volumes contains essays that explore vital existential moral or metaphysical issues surrounding the relationship between the sciences and the world's religions In Science and the World's Religions experts with scientific and religious backgrounds explore vital existential or practical issues drawing on whatever sciences are relevant and engaging at least two religious traditions The multidisciplinary essays exhibit rigorous intellectual scholarly thinking but are written to clearly communicate to educated adult lay readers The first volume addresses questions about the origins and purpose of the cosmos and the human project The second volume investigates the roles of religion and spirituality in human existence considering issues ranging from the brain and religious experience to the human life cycle The third volume tackles controversies in which both religion and science are stakeholders showing how both can deepen understanding and enrich human experience

Together these three books present readers with powerful tools that enable them to think through the challenge of integrating science with their religious beliefs and spiritual practices
