The Basic Problems of Phenomenology Martin Heidegger, 1988-08-22

An excellent translation of an essential text by the author of Being and Time in which he continues his pioneering work in phenomenology Times Literary Supplement UK A lecture course that Martin Heidegger gave in 1927 The Basic Problems of Phenomenology continues and extends explorations begun in Being and Time In this text Heidegger provides the general outline of his thinking about the fundamental problems of philosophy which he treats by means of phenomenology and which he defines and explains as the basic problem of ontology For all students and scholars Basic Problems will provide the missing link between Husserl and Heidegger between phenomenology and Being and Time Teaching Philosophy

The Oxford

Handbook of Moral Realism Paul Bloomfield, David Copp, 2023 Morality seems to play a special role in human life distinct

from conventional norms like those of etiquette or simple preferences based on subjective tastes There are various theories of the foundations of morality some of which treat morality as subjective in an important way Moral realism is however a family of theories that take morality to have an objective factual basis such that morality is not up to us and is not under our control The contributions in this Oxford Handbook explore the central ideas and themes constituting moral realism and defend particular views about it

Phenomenalism, Phenomenology, and the Question of Time Adam Berg, 2015-12-15

Phenomenalism Phenomenology and the Question of Time A Comparative Study of the Theories of Mach Husserl and Boltzmann analyzes two interconnected themes the split between phenomenalism and phenomenology and the question of time in relation to physical processes and irreversibility in physics The first theme is the overlooked connections between the modern phenomenology of Edmund Husserl and his mentor Franz Brentano and phenomenalism as associated with Ernst Mach The book's historical conceptual perspective draws attention to the ways in which Husserl's twentieth century advance of phenomenological method was conceived in relation to Mach's late nineteenth century and early twentieth century work both in science and philosophy At first glance Mach's phenomenalism appears to be in stark contrast to Husserl's phenomenology but on closer inspection it influenced and informed its inception By analyzing Husserl's revolutionary method of phenomenology in connection to Mach's earlier conceptions the book elucidates the rise of modern physics especially through the work of Ludwig Boltzmann as an important context to both Mach's philosophical work and Husserl's early overtures into phenomenology and his later critique of the crisis of European sciences The discursive affinities and differences between phenomenalism and phenomenology are examined in terms of a more contemporary debate over naturalizing phenomenology either as a method continuous with science or reduced to it This immanent tension is examined and evaluated specifically through the second thematic axis of the book which deals with the question of time and irreversibility Time in physics conforms to an explanatory scheme that relegates the issues of directionality and symmetry of time to concepts that are radically different from any phenomenological attempts to explain temporality in terms of intuition and consciousness It is precisely through the notion of irreversibility that both perspectives scientific and phenomenological explicate time's arrow not as a mere manifestation of sensory asymmetry as Mach would have it but rather through indirect descriptions of time and temporal objects The issue of time's arrow irreversibility and Boltzmann's physical hypotheses regarding the nature of time are introduced and comparatively assessed with Husserl's work on phenomenology and the role of temporality to consciousness

Philosophy of Science Wang Wei, 2020-12-29 The book is a translation of the second edition of a much used and research based Chinese textbook As a succinct and issue based introduction to the Western philosophy of science the book brings eight focal issues in the field to the fore and augments each topic by incorporating Chinese perspectives Followed by an overview of the historical framework and logical underpinnings of the philosophy of science the book thoroughly discusses eight issues in the discipline 1 the criteria of cognitive meaning 2 induction and

confirmation 3 scientific explanation 4 theories of scientific growth 5 the demarcation between science and pseudoscience 6 scientific realism and empiricism 7 the philosophy of scientific experimentation 8 science and value Not confined to Western mainstream discourse in this field the book also introduces voices of Chinese philosophers of note and adopts a stance that productively combines logical empiricism and Kuhnianism both of which tend to be covered in less detail by many English language textbooks In the final chapter the author offers a prognosis regarding the future of the discipline based on recent trends This book will be of value to students who study philosophy of science and hope to gain a better understanding of science and technology BIOLOGICAL SCIENCE FUNDAMENTALS AND SYSTEMATICS - Volume I Alessandro
