The Varieties of Orthographic Knowledge V.W. Berninger, 2013-03-09 The role of orthography in reading and writing is not a new topic of inquiry For example in 1970 Venezky made a seminal contribution with *The Structure of English Orthography* in which he showed how both sequential redundancy probable and permissible letter sequences and rules of letter sound correspondence contribute to orthographic structure In 1980 Ehri introduced the concept of orthographic images that is the representation of written words in memory and proposed that the image is created by an amalgamation of the word s orthographic and phonological properties In 1981 Taylor described the evolution of orthographies in writing systems from the earliest logographies for pictorial representation of ideas to syllabaries for phonetic representation of sounds to alphabets for phonemic representation of sounds In 1985 Frith proposed a stage model for the role of orthographic knowledge in development of word recognition Initially in the logographic stage a few words can be recognized on the basis of partial spelling information in the alphabetic stage words are recognized on the basis of grapheme phoneme correspondence in the orthographic stage spelling units are recognized automatically without phonological mediation For an historical overview of research on visual processing of written language spanning the earliest records of writing to the early work in experimental psychology see Venezky 1993

Speech and Reading Beatrice de Gelder, Jose Morais, 2017-11-01 Originally published in 1995 this collection of papers introduced a new dimension to the understanding of reading by focusing on the relation between spoken and written language processing New perspectives on speech and reading are introduced by highlighting aspects of the two linguistic skills that had received little attention in the

past The comparative perspective adopted in this collection presents an innovative focus on speech and the acquisition of alphabetic reading skill Major new sources of evidence are discussed like reading in nonconventional input modalities braille reading and speech processing in lip reading Contributors also discuss the reading process in non alphabetic orthographies and the specifics of the reading acquisition problem in logographic or mixed writing systems like Chinese and Japanese and their relations to underlying speech representations A central concern of all chapters is the role of phonological processes in different modalities and writings systems and at different stages in the reading acquisition process Drawing on expertise of the contributors the book presents a novel and varied view of the achievements the promises and the challenges facing the researcher once the intimate link between speech and reading comes to the foreground

Handbook of Children's Literacy Terezinha Nunes,Peter Bryant,2013-03-09 PETER BRYANT TEREZINHA NUNES The time that it takes children to learn to read varies greatly between different orthographies as the chapter by Sprenger Charolles clearly shows and so do the difficulties that they encounter in learning about their own orthography Nevertheless most people who have the chance to learn to read do in the end read well enough even though a large number experience some significant difficulties on the way Most of them eventually become reasonably efficient spellers too even though they go on make spelling mistakes at any rate if they are English speakers for the rest of their lives So the majority of humans plainly does have intellectual resources that are needed for reading and writing but it does not always find these resources easy to marshal What are these resources Do any of them have to be acquired Do different orthographies make quite different demands on the intellect Do people differ significantly from each other in the strength and accessibility of these resources If they do are these differences an important factor in determining children s success in learning to read and write These are the main questions that the different chapters in this section on Basic Processes set out to answer

Word Recognition in Beginning Literacy Jamie L. Metsala, Linnea C. Ehri, 2013-06-17 This edited volume grew out of a conference that brought together beginning reading experts from the fields of education and the psychology of reading and reading disabilities so that they could present and discuss their research findings and theories about how children learn to read words instructional contexts that facilitate this learning background experiences prior to formal schooling that contribute and sources of difficulty in disabled readers The chapters bring a variety of perspectives to bear on a single cluster of problems involving the acquisition of word reading ability It is the editors keen hope that the insights and findings of the research reported here will influence and become incorporated into the development of practicable classroom based instructional programs that succeed in improving children s ability to become skilled readers Furthermore they hope that these insights and findings will become incorporated into the working knowledge that teachers apply when they teach their students to read and into further research on reading acquisition

Implicit and Explicit Mental Processes Kim Kirsner, Craig Speelman, Murray Maybery, Angela O'Brien-Malone, Mike Anderson, 2013-06-17 The need for synthesis in the domain of implicit processes was the motivation behind this book Two major questions sparked its development Is there one implicit process or processing principle or are there many Are implicit memory learning and expertise skill acquisition and automatic detection simply different facets of one general principle or process or are they distinct processes performing very different functions This book has been designed to cast light on this issue Because it is impossible to make sense of implicit processes without taking into account their explicit counterparts consideration is also given to explicit memory learning and expertise and controlled processing The chapter authors consider principles processes and models which stand above a wealth of data collected to evaluate models designed specifically to account for data from a specific paradigm or even more

narrowly from a specific experimental task The motivation behind this approach is the proposition that modeling is possible for a much broader data domain even though there may be some cost where specific tasks are concerned The aim of this book is to treat synthesis as the objective and to approach this objective by collecting and discussing phenomena which although they are drawn from diverse areas of psychological science touch a single issue concerning the distinction between explicit and implicit processes
