Hannahs, 2010-11-05 This study is an examination of morphophonology in terms of the interaction between morphological structure and phonological structure The goals of the study are to propose a coherent way of looking at morphophonology in structural terms while assuming a certain autonomy of the phonological and morphological components The study assumes the basic lexical postlexical dichotomy of Lexical Phonology but refers centrally to prosodic structure of the type proposed by Selkirk 1980 and further developed by among others Nespor Vogel 1986 rather than to level ordering The specific processes of French

morphophonology examined here include certain aspects of prefixation and nasalization glide information closed syllable adjustment and penultimate schwa specification which are reanalysed in structural terms in contrast to analyses in the literature relying on level ordering Other aspects of French morphophonology argued in the literature to be rule governed such as Learned Backing are reanalysed in terms of stem suppletion The study thus supports Aronoff Sridhar 1987 Fabb 1988 Booji 1989 and others in arguing against level ordering while following the lead of Booji Lieber 1993 Inkelas 1989 and others in advocating the concurrent existence of both morphological and prosodic structure

Yearbook of Morphology 2002 G.E. Booij, Jaap van Marle, 2006-04-11 A revival of interest in morphology has occurred during recent years The Yearbook of Morphology series published since 1988 has proven to be an eminent support for this upswing of morphological research since it contains articles on topics which are central in the current theoretical debates which are frequently referred to In the Yearbook of Morphology 2002 a number of articles is devoted to the morphology of a variety of pidgin and creole languages which appear to have much more morphology than traditionally assumed A second topic of this volume is the morphological use of truncation for the coinage of proper names in Germanic and Romance languages in particular endearment forms with highly interesting consequences for the theory of phonology morphology interaction Thirdly this volume contains articles on how affixes are combined and ordered in complex words and the complex linguistic principles behind these orderings

The Phonology and Morphology of Kimatuumbi David Arnold Odden, 1996 As is typical of African languages there is little published material on Kimatuumbi a Bantu language spoken in Tanzania Apart from Professor Odden's own theoretically oriented papers the only existing primary description of the language is Krumm's Grundriss einer Grammatik des Kimatubi 1912 which lacks any discussion of two of the most interesting and complex phonological properties of the language vowel length and tone The descriptive account of these properties and of rule interaction in Kimatuumbi phonology bears on a number of important theoretical issues including theories of interaction between phonology and syntax lexical phonology the geometric representation of vowel features and the theory of prosodic representations This study both broadens our understanding of the structure of African languages and provides data which are crucial for resolving certain questions in contemporary phonology theory
