Carbohydrate-based Drug Discovery, 2 Volume Set Chi-Huey Wong, 2003-10-17 Die Suche nach Medikamenten mit neuen oder verbesserten Eigenschaften hat das Interesse am pharmazeutischen Potenzial von Kohlenhydraten enorm verstärkt. Dies gilt insbesondere für die Entwicklung von Antibiotika, Impfstoffen und Anti-Krebs-Mitteln. Carbohydrate-based Drug Discovery stellt mit mehr als 50 Beiträgen der weltweit führenden Experten die neuesten Entwicklungen in der Kohlenhydrat- und Biochemie vor. Dabei liegt der Schwerpunkt der Darstellung auf der pharmazeutischen Anwendung. In jüngster Zeit sind wirksame auf Kohlenhydraten basierende Medikamente gegen HIV, Grippe, Epilepsie, Diabetes und Krebs auf den Markt gekommen bzw. werden in Studien klinisch erprobt. Doch das gesamte Potenzial dieser Substanzklasse kann man bislang wohl nur erahnen. Die pharmazeutische Industrie investiert bereits große Summen in die Forschung und Entwicklung. So kommt dieses Handbuch genau zur richtigen Zeit. Umfassend und kompetent behandelt es den gesamten Bereich der Kohlenhydratchemie. Es führt ein in die chemische Synthese, in Biosynthese und Metabolismus und informiert über die Analyse und die zellulären Funktionen von Kohlenhydraten. Einen weiteren Schwerpunkt bildet die Entwicklung von Medikamenten auf Kohlenhydrat-Basis wie z.B. synthetischer Impfstoffe oder Thrombosemittel auf Basis synthetischer Oligosaccharide. Erschlossen wird das mit einem umfangreichen bibliographischen Anhang versehene Werk durch einen thematischen Index. Sein Herausgeber Chi-Huey Wong hat bereits mehrere internationale Preise für sein wissenschaftliches Werk erhalten, darunter den Presidential Award und den Presidential Young Investigator Award.

Revival: CRC Handbook of Eicosanoids, Volume II (1989) A. L. Willis, 2017-07-28 Building upon the extensive compilation of biochemical data featured in Volume I of the *Handbook of Eicosanoids*, the new Volume II describes the past, present, and potential future impact of eicosanoid research on new drug development. The reader is taken from a historical perspective through state-of-the-art basic concepts to extensive tabulation of molecular structures of compounds known to act via the eicosanoid system. Much emphasis is given to recent

breakthroughs in the mechanism of action of anti inflammatory corticosteroids and the development of receptor antagonists for prostaglandins and leukotrienes There is also an introductory chapter that proposes areas that require further investigation and novel approaches using existing technology This handbook will thus be invaluable for medicinal chemists pharmacologists and all those involved in basic research in the eicosanoid area In addition many parts of this handbook are suitable for use by university lecturers and students There are 20 figures and 44 extensive tables as well as a bibliography containing more than 2 000 references that complement the text

Biochemistry and Cell Biology ,1993 *Cellular Regulation of Secretion and Release* P. Michael Conn,2013-09-24 Cellular Regulation of Secretion and Release is a compilation of papers that deals with the processes in cellular perception of stimuli and the response to them Part I describes the receptor occupancy and regulation of stimulus through the use of video image intensification techniques This part also explains a model for the transmembrane regulation of adenylate cyclase that shows the mechanisms that cells use in sensing and responding to extracellular conditions Part II discusses the early responses of secretory cells including changes in phospholipid metabolism in electrophysiological events and in macromolecular carboxymethylation One paper suggests that protein carboxyl methylase has a role in neurotransmission and secretion whether as a part of the exocytotic process or just a help to regulate the process Part III addresses the role in secretion of the subcellular architecture particularly as regards the role of the cytoskeleton in endocrine function or insulin secretion and cytoskeletal proteins Part IV discusses the synthesis processing and storage of secretory products including the role of signal peptides their properties and interactions Part V addresses the mechanisms and modulation of secretion and release in a study of Leydig cells One paper concludes that the regulation of release through dopamine and TRH factors can have more than one mechanism of action This book can be useful for cellular microbiologists bacteriologists endocrinologists researchers and academicians in the biochemistry and in reproductive medicine **Biomembranes, Structural and**

Cell Chemistry and Physiology: Part I Edward Bittar, 1996-01-04 This is the first of a 4 volume module that is an introduction to the study of cell chemistry and physiology It is not intended to be encyclopedic in nature but rather a general survey of the subject with an emphasis on those topics that are central to an understanding of cell biology and those that are certain to become of increasing importance in the teaching of modern medicine We have followed what appeared to

as to be the logical divisions of the subject beginning with proteins Allewell and her colleagues stress the point that proteins fold spontaneously to form complex three dimensional structures and that some of them unfold with the help of proteins called chaperones Michaelis Menten kinetics are shown by Nelsestuen to describe the behaviour of enzymes in the test tube The formalism is particularly useful in the search for agents of therapeutic value as exemplified by methotrexate Uptake by mammalian cells of substrates and their metabolic conversions are discussed by van der Vusse and Reneman However both Welch and Savageau expound the view that the cell is not simply a bagful of enzymes The biologist is urged by Savageau to abandon Michaelis Menten formalism and apply the Power Law The biologist is also told that the approach to arriving at a theory of metabolic control would have to be one of successive approximations requiring the use of the computer Information gained from comparative biochemistry is shown by Storey and Brooks to have shed new light on mechanisms of metabolic rate depression and freeze tolerance and to be applicable to organ transplantation technology We are reminded that enzyme adaptation is partly the result of the presence of a hydrating shell of vicinal water that stabilises conformation of the enzyme Vicinal water according to Drost Hausen and Singleton lies adjacent to most solids and protein interfaces The kinks or breaks observed in the slope of the Arrhenius plot are attributed to structural changes in vicinal water Regulation of cell volume is shown by Hempling to involve regulation of cell water It could be that the osmo receptor or volume detection system is a protein that links the cytoskeleton to specific K and C1 channels Additionally it is interesting that aquaporins which are water channel forming membrane proteins are now known to exist in both renal and extra renal tissues One of the renal porins is affected by vasopressin We then pass on to protein synthesis Rattan and other important topics including protein glycosylation Hounsell methylation Clarke ADP ribosylation Pearson and prenylation Gelb Among the four types of lipids attached to membrane proteins are the prenyl groups Ford and Gross in their chapter on lipobiology drive home the point that there is an accumulation of acyl carnitine and lysophospholipids during myocardial infarction
