Photoelectronic Image Devices, Proceedings of the 10th Symposium on Photoelectronic Image Devices, 'the McGee Symposium' Held 6 September 1991 at Imperial College Brian Lealan Morgan, 1992 The 10th Symposium on Photoelectronic Image Devices was held at Imperial College University of London on 2-6 September 1991 Covering the latest developments and applications of detectors and systems this volume contains 52 papers from leading international researchers It is divided into the following sections Astronomical applications image intensifiers design and characterisation scientific applications techniques camera tubes and electron optics The performance and assessment of detector systems are also discussed This research level volume has applications over an enormous range of disciplines It will be of interest and value to researchers both developing and using photoelectronic detectors in academic government and industrial laboratories working in the areas of nuclear and particle physics astronomy space science medicine telecommunications and military applications **Advances in Imaging and Electron Physics** Peter W. Hawkes, Martin Hÿtch, 2023-03-28 **Advances in Imaging and Electron Physics** Volume 226 merges two long running serials **Advances in Electronics and Electron Physics** and **Advances in Optical and Electron Microscopy** Chapters in this release cover Characterization of nanomaterials properties using FE TEM Cold field emission electron sources From higher brightness to ultrafast beams Every electron counts Towards the development of aberration optimized and aberration corrected electron sources and more The series features articles on the physics of electron devices especially semiconductor devices particle optics at high and low energies microlithography image science digital image processing electromagnetic wave propagation electron microscopy and the computing methods used in all these domains Provides the authority and expertise of leading contributors from an international board of authors Presents the latest release in the **Advances in Imaging and Electron Physics** **Survey of Image Quality Criteria for Passive Night Vision Devices** Joseph C. Richmond, 1974 **Publishers' Trade List Annual, 1980** Bobbs-Merrill Educational Co, 1980 **Photoelectronic Imaging Devices** Lucien Biberman, 2013-11-11 The past decade has seen a major resurgence in optics research and the teaching of optics throughout the major universities both in this country and abroad Electrooptical devices have become a challenging form of study that has penetrated both the electrical engineering and the physics departments of most major schools There seems to be something challenging about a laser that appeals to both the practical electrical engineer with a hankering for fundamental research and to the fundamental physicist with a hankering to be practical Somehow or other this same form of enthusiasm has not previously existed in the study of photoelectronic devices that form images This field of endeavor is becoming more and more sophisticated as newer forms of solid state devices enter the field not only in the data processing end but in the conversion of radiant energy into electrical charge patterns that are stored manipulated and read out in a way that a decade ago would have been considered beyond some fundamental limit or other It is unfortunate however that this kind of material has heretofore been learned only by the

process of becoming an apprentice in one or more of the major development laboratories concerned with the manufacture of image intensifiers or television tubes or the production of systems employing these devices Spaceborne Electronic Imaging Systems Electronics Research Center (U.S.),1971 *Technical Report , Proceedings of the 15th International Congress on High Speed Photography and Photonics, August 21-27, 1982, San Diego, California, USA* Lincoln L.

Electron Dynamics of Diode Regions
Charles K. Birdsall, 1966-01-01 Electron Dynamics of Diode Regions describes the model construction and analysis of motion of charged particles of diode regions in time varying fields The models analyzed are simplified versions of parts of practical devices primarily active microwave devices tubes and semiconductor amplifiers while the most striking results obtained are due to electron inertia and space charge effects in terms of laboratory observable This book is composed of seven chapters and begins with an introduction to the general concepts of time dependent flow including induced current the techniques of linearization calculating variational transit time and obtaining equivalent circuits The following chapters present the classical linear analysis which includes the space charge effects with several applications These chapters also explore the existence of a maximum stable current in a space charge limited diode The discussion then shifts to the basics of high velocity klystron gap with nonuniform field distributions and the application of the multicavity klystron This text further covers the analysis and examples of crossed field gaps The final chapters deal with the fundamentals of velocity and current distributions obtained from common electron emitters with some attempt to show how the multivelocisty streams evolve into single velocity equivalents needed for the methods of earlier chapters Results of applying the Lagrangian starting analysis to semiconductor diode regions necessarily from a new equation of motion are also provided This book is intended for graduate courses seminars and research studies
