William A. Noyes, Philip A. Leighton, 1987-01 **The Photochemistry of Gases** William Albert Noyes, The Photochemistry of Atmospheres Joel Levine, 2012-12-02
The Photochemistry of Atmospheres Earth the Other Planets and Comets discusses the photochemical and chemical processes in atmospheres This book focuses on the earth s atmosphere in the past present and future atmospheres of other planets and their satellites and comets General topics in atmospheric photochemistry such as composition and structure transfer of incoming solar radiation and principles governing the rates of photochemical and chemical processes are also elaborated This text also covers the role of eddy and molecular transport and continuity transport equation used in theoretical numerical modeling studies This publication is recommended for advanced level courses in the atmospheric and planetary sciences as well as reference for those interested in learning about atmospheric climatic environmental problems their causes and consequences and discoveries concerning the atmospheres of neighboring worlds Fundamentals of Photochemistry K. K. Rohatgi-Mukherjee, 1978 *Photoacoustic, Photothermal and Photochemical Processes in Gases* Peter Hess, 2012-12-06
Gas phase photoacoustics are treated comprehensively for the first time in this book Review articles by leading scientists in the respective research areas introduce their fields review present knowledge and conclude with the latest developments and future prospects Topics covered include the theory of photoacoustics in the frequency and time domains acoustic resonator models a great variety of experimental setups and techniques studies of spectroscopy and fundamental kinetic processes such as energy transfer and chemical reactions and applications such as air and exhaust monitoring and trace gas detection in biology and agriculture The book will interest newcomers to photoacoustics since it gives an overview of the important directions of current research and detailed descriptions of experimental methods It will also be a valuable source of information for those already involved in photoacoustic research due to its clear presentation of theory and experimental results All relevant literature references in this rapidly expanding field of laser applications are included *Photodissociation of Simple Molecules in the Gas Phase* Hiroyasu Sato, 1992 Spectroscopy and Photochemistry of Planetary Atmospheres and Ionospheres Vladimir A. Krasnopolsky, 2019-02-14
The chemical composition of any planetary atmosphere is of fundamental importance in determining its photochemistry and dynamics in addition to its thermal balance climate origin and evolution Divided into two parts this book begins with a set of introductory chapters starting with a concise review of the Solar System and fundamental atmospheric physics Chapters then describe the basic principles and methods of spectroscopy the main tool for studying the chemical composition of planetary atmospheres and of photochemical modeling and its use in the theoretical interpretation of observational data on chemical composition The second part of the book provides a detailed review of the carbon dioxide atmospheres and ionospheres of Mars and Venus and the nitrogen methane atmospheres of Titan Triton and Pluto Written by

an expert author this comprehensive text will make a valuable reference for graduate students researchers and professional scientists specializing in planetary atmospheres

Aquatic and Surface Photochemistry George R. Helz, 2018-01-10

Aquatic and Surface Photochemistry provides a broad overview of current research in the emerging field of environmental aquatic and surface photochemistry Selected reviews and current research articles are blended to provide an in depth treatment of various aspects of this research area The first part of the text deals with photochemistry in the environment covering recent research on the following topics aquatic photochemistry of organic pollutants and agrochemicals photochemical cycling of carbon and transition metals especially iron photochemical formation of reactive oxygen species in natural waters photoreaction in cloud and rain droplets and photoreactions on environmental surfaces soil ash metal oxide The second part provides discussions and data on both heterogeneous photocatalytic and homogeneous processes with topics ranging from applications to mechanistic studies These chapters illustrate the wide diversity of pollutant classes that are degradable by photochemical techniques and the effects of various reaction conditions on the rates and efficiency of the techniques Current kinetic studies are presented which provide new information about the role of adsorption and the nature of the reactive oxidizing species that mediate these photoremediation processes This book will interest civil chemical and environmental engineers as well as chemists soil scientists geochemists and atmospheric chemists

Atmospheric Measurements during POPCORN — Characterisation of the Photochemistry over a Rural Area J. Rudolph, R. Koppmann, 2013-04-17 Present policy issues concern the reduction of ozone levels by controlling its precursors NO_x and volatile organic compounds VOC VOC are emitted from anthropogenic and

biogenic sources Whereas our understanding of VOC emissions from anthropogenic sources has advanced significantly in recent years there is still a lack of knowledge concerning the contribution of biogenic VOC to the budget of organic trace gases and their impact on the formation of ozone in the troposphere Improving ozone reduction strategies in the future requires a detailed understanding of the chemical processes in the troposphere This book comprises the results of atmospheric measurements obtained during the field campaign POPCORN Photo Oxidant Formation by Plant Emitted Compounds and OH Radicals in North Eastern Germany which was carried out to investigate the role and impact of biogenic trace gases on tropospheric chemistry This volume describes meteorological situations and origins of air masses during the campaign and presents measurements of a variety of trace gases solar radiation and photolysis frequencies Special attention is given to OH radical measurements and the in situ comparison of the two OH measurement techniques
