Photographic Atlas of Reconstructive Arterial Surgery J.J.A.M. van Dongen, 2012-12-06 Direct surgery on arteries was born at the turn of the nineteenth and twentieth century. However, it was only during the last twenty-four years that this new chapter of clinical surgery could be well established owing to diverse kinds of minds and hands. The result is that limbs, organs, functions, and lives have since then been saved in increasing numbers. We may now consider that the main impulse of this new phase is over. But the material of which the chapter was built is still defective, incomplete, or inadequate, and therefore surgeons and many other men will still have to spend a lot of sagacity and vigour to give this chapter its proper arrangement. Principles evolve, methods are modified as a result of technical progress, surgeons' solid opinions on a particular matter give way to other distinct but equally solid opinions on the same matter. These are the reasons why the moment we are living in is a wonderful one. As always in life, the great flame burns more intensely when one finds himself at the verge of attaining some proposed design. The first phase of dream and failure has given way to a more structured ground on which the final battle must be fought. Such a battle is taking place right now. *Vascular Surgery* Georg Heberer, R.J.A.M. van Dongen, 2012-12-06 A certain standardization has now been introduced into the operative techniques of vascular surgery after the stormy developments of the last few decades. It is to make the knowledge gained in those years more widely available that this operative manual *Vascular Surgery* has been compiled. It contains contributions from numerous authors at European centers of vascular surgery. Both the young surgeon in training and the more experienced surgeon continuing training will find in this book all the necessary instructions for the diagnosis, preoperative preparation, and reconstructive surgery of the arteries, veins, and lymph vessels. The coronary vessels are excluded from this book as they are covered separately. The chapters are structured according to a uniform scheme with sections on special anatomy, indications, surgical tactics, and operative technique. The dynamics of individual operations are illustrated step by step in sequences of clear, multicolored figures. Aftercare and alternative angiologic therapies are covered. The vascular surgeon will find here new variants on the usual operative techniques and much stimulating discussion of complications and their prevention and treatment. Air Instrument Surgery Robert M. Hall, 2012-12-06 The use of the compressed air-driven turbine for the activation of surgical burs and saws as developed by Dr. Robert M. Hall has been a boon for the plastic maxillofacial and oral surgeon. The development of air instrument surgery coincided with the opening of new vistas in surgery in the area of craniofacial surgery. Craniofacial osteotomies for orbital, ocular, hypertelorism, for the deformities of cranio stenosis, Crouzon's disease, Apert's syndrome, and subcranial osteotomies at various levels of the facial skeleton have brought about dramatic improvements in the form of the facial substructure in patients with gross deformities. In many of these maxillofacial deformities, the facial skeleton and dentoalveolar processes must be advanced, recessed, or expanded in the lateral dimension. In such cases, malocclusion of the teeth is usual; this is corrected by intermaxillary fixation of the mobilized bony structures.

which also reestablishes adequate relationships between the dento alveolar processes of the upper and lower jaws This brings us to the subject of surgical orthodontics a field that is just beginning to expand its development should bring about closer collaboration between surgeon and orthodontist resulting in rapid and efficient improvement of malocclusion The absence of vibration characteristic of the air driven turbine in contrast to the mechanically driven drill allows the surgeon to carry out delicate and precise surgical procedures with less fatigue to himself
