Encyclopedia of Medical Devices and Instrumentation John G Webster Editor in Chief This comprehensive encyclopedia the work of more than 400 contributors includes 266 articles on devices and instrumentation that are currently or likely to be useful in medicine and biomedical engineering The four volumes include 3 022 pages of text that concentrates on how technology assists the branches of medicine The articles emphasize the contributions of engineering physics and computers to each of the general areas of medicine and are designed not for peers but rather for workers from related fields who wish to take a first look at what is important in the subject Highly recommended for university biomedical engineering and medical reference collections and for anyone with a science background or an interest in technology Includes a 78 page index cross references and high quality diagrams illustrations and photographs 1988 0 471 82936 6 4 Volume Set
Introduction to Radiological Physics and Radiation Dosimetry Frank Herbert Attix provides complete and useful coverage of radiological physics Unlike most treatments of the subject it encompasses radiation dosimetry in general rather than discussing only its applications in medical or health physics The treatment flows logically from basics to more advanced topics Coverage extends through radiation interactions to cavity theories and dosimetry of X rays charged particles and neutrons Several important subjects that have never been thoroughly analyzed in the literature are treated here in detail such as charged particle equilibrium broad beam attenuation and geometries derivation of the Kramers X ray spectrum and the reciprocity theorem which is also extended to the nonisotropic homogeneous case 1986 0 471 01146 0 607 pp Medical Physics John R Cameron and James G Skofronick This detailed text describes medical physics in a simple straightforward manner It discusses the physical principles involved in the control and function of organs and organ systems such as the eyes ears lungs heart and circulatory system There is also coverage of the application of mechanics heat light sound electricity and magnetism to medicine particularly of the various instruments used for the diagnosis and treatment of disease 1978 0 471 13131 8 615 pp **RCA Phototubes and Photocells** , 1963 Elektronenr hre Fernsehbildr hre Kathodenstrahlr hre Sender hre Handbuch *Physical and Optical Properties of Projection Screens* Robert J. Klaiber, 1966 The scattered inconsistent and incomplete data in the literature have prompted a comprehensive study of the physical and optical properties of projection screens A large sample number of front and rear projection screens was obtained representing the industry line of January 1965 The reflected and transmitted flux distribution of each sample was measured using a small collimated test beam of white light incident normally and at 45 degrees A vacuum photodetector spectrally matched to the eye was situated on a radius arm and capable of viewing the test sample at any angle in a plane The reflectance or

transmittance of the samples was calculated using data from the measured reflected flux distribution of an easily reproduced magnesium oxide standard Measurements were made of resolving power and physical properties and the maximum angular viewing field of each screen was determined for a typical projection geometry and tolerable field brightness gradient Author

Advances in Measurement Systems Milind Sharma, 2010-04-01 This book is a collection of 24 chapters concerning the developments within the Measurement Systems field of study The collection includes scholarly contributions by various authors and edited by a group of experts pertinent to Measurement Systems Each contribution comes as a separate chapter complete in itself but directly related to the book's topics and objectives The target audience comprises scholars and specialists in the field A Manual of Psychophysiological Methods Irene Martin, 1967 *Methods in Microbiology*

, 1970-02-28 Traditional methods of cultivation of micro organisms provide little control over the ever changing physical and chemical environments to which growing populations are exposed The need for a variety of highly standardized conditions of growth and the selection of several new parameters to measure growth or cultural progress has been recognized This volume describes the measurement and control of the physical and chemical factors that affect or indicate microbial activities usually in homogeneous liquid culture An introduction to the general principles of chemical and physical measurements and to the automatic recording and control of them is presented Some chapters focus on the theoretical and practical aspects of techniques of continuous cultivation in the laboratory with indications of its application to research problems **RCA**
