Phylogeny Speciation And Palaeoecology Of The Early Carboniferous Mississippian Conodont Genus Mestognathus:

Phylogeny, Speciation, and Palaeoecology of the Early Carboniferous (Mississippian) Conodont Genus Mestognathus
Peter H. Von Bitter, Charles Albert Sandberg, M. J. Orchard, 1986 Mestognathus an important Early Carboniferous conodont genus whose appearance has generally been thought to coincide with and define the base of the Visean evolved from Clydagnathus during the Tournaisian and ranges from that stage into the Namurian Five species including M harmalai sp nov and M praebeckmanni sp nov are distinguished by the gradual phyletic development of the parapet the fixed blade the anterior notch the position of the carinal deflection and the increasing tendency to evert the basal cavity Mestognathus dhuensis and M neddensis are demonstrated to be synonyms of M beckmanni M bipluti or Mestognathus spp **The Carboniferous Timescale** S.G. Lucas, J-W. Schneider, X. Wang, S. Nikolaeva, 2022-04-26 The print edition is published as 2 hardback volumes parts A and B and sold as a set The Carboniferous was the time of the assembly of Pangaea by the collision of the Gondwanan and Larussian supercontinents and the principal interval of the late Paleozoic ice ages These tectonic and climatic events caused dramatic sea level fluctuations and climate changes and produced a Carboniferous world that was diverse topographically and climatologically perhaps only rivalled in that diversity by the late Cenozoic world Furthermore the Carboniferous was a time of the accumulation of vast coal deposits of great economic and societal significance The temporal ordering of geological and biotic events during Carboniferous time thus is critical to the interpretation of some unique and pivotal events in Earth history This temporal ordering is based on the Carboniferous timescale which has been developed and refined for nearly two centuries This book reviews the history of the development of the Carboniferous chronostratigraphic scale and includes comprehensive analyses of Carboniferous radioisotopic ages magnetostratigraphy isotope based correlations cyclostratigraphy and timescale relevant marine and non marine biostratigraphy and biochronology **Faunal and Floral Migration and Evolution in SE Asia-Australasia** Ian Metcalfe, Jeremy M.B. Smith, Mike Morwood, Iain Davidson, 2001-06-01 This multidisciplinary book focuses on the relationships and interactions between palaeobiogeography biogeography dispersal vicariance migrations and evolution of organisms in the SE Asia Australasian region The book investigates biogeographic links between SE Asia and Australasia which go back more than 500 million years It also focuses on the links between geological evolution and biological migrations and evolution in the region It was in the SE Asian region that Alfred Russell Wallace established his biogeographic line now known as Wallace s Line which was the beginning of biogeography Wallace also independently developed his theory of evolution based on his work in this area The book brings together for the first time geologists palaeontologists zoologists botanists entomologists evolutionary biologists and archaeologists in the one volume to relate the region s geological past to its present biological peculiarities The book is organized into six sections Section 1 Paleobiogeographic Background provides overviews of the geological and

tectonic evolution of SE Asia Australasia and changing patterns of land and sea for the last 540 million years Section 2 Palaeozoic and Mesozoic Geology and Biogeography discusses Palaeozoic and Mesozoic biogeography of conodonts brachiopods plants dinosaurs and radiolarians and the recognition of ancient biogeographic boundaries or Wallace Lines in the region Section 3 Wallace's Line focuses on the biogeographic boundary established by Wallace including the history of its establishment its significance to biogeography in general and its applicability in the context of modern biogeography Section 4 Plant biogeography and evolution includes discussion on primitive angiosperms the diaspora of the southern rushes and environmental climatic and evolutionary implications of plants and palynomorphs in the region The biogeography and migration of insects butterflies birds rodents and other non primate mammals is discussed in section 5 Non Primates The final section 6 Primates focuses on the biogeographic radiation migration and evolution of primates and includes papers on the occurrence and migration of early hominids and the requirements for human colonization of Australia **Canadiana**

Proceedings of the XVth International Congress on Carboniferous and Permian Stratigraphy Theo Edward Wong, 2007 A compendium of papers first presented at the fifteenth annual International Congress on Carboniferous and Permian Stratigraphy this book offers an overview of the latest research on rock formation that took place over 250 million years ago. This ancient sediment which provides much of the mineral resources we use today is a key indicator of massive environmental shifts that occurred around the creation of the super continent Pangea. Organized thematically the book covers a wide variety of topics including the structural development of Carboniferous basins, the paleontology of those periods and Carboniferous and Permian timescales and global correlations. As the contributors demonstrate a better understanding of the evolution of the earth during the Carboniferous and Permian periods will not only help us find more mineral resources but will also provide insight into important modern environmental questions. *Paleozoic Paleogeography of the Western United States II* Calvin H. J. Orchard, Alexander D. McCracken, Geological Survey of Canada, 1991 This compilation is a synthesis of Ordovician Triassic conodont research undertaken in the Canadian Cordillera during the past decade. The studies include an overview of the record in Western Canada, a review of the paleontology and descriptions of conodonts from the Cordillera Road River group in northern Yukon Territory from the eastern and northern Canadian cordillera of the Palliser Formation in the Rocky Mountains and from the Cache Creek Complex in south central B.C.
