Ω-Bibliography of Mathematical Logic Heinz-Dieter Ebbinghaus, 2013-06-29 Gert H M ller The growth of the number of publications in almost all scientific areas as in the area of mathematical logic is taken as a sign of our scientifically minded culture but it also has a terrifying aspect In addition given the rapidly growing sophistica tion specialization and hence subdivision of logic researchers students and teachers may have a hard time getting an overview of the existing literature partic ularly if they do not have an extensive library available in their neighbourhood they simply do not even know what to ask for More specifically if someone vaguely knows that something vaguely connected with his interests exists some where in the literature he may not be able to find it even by searching through the publications scattered in the review journals Answering this challenge was and is the central motivation for compiling this Bibliography The Bibliography comprises presently the following six volumes listed with the corresponding Editors I Classical Logic W Rautenberg 11 Non classical Logics W Rautenberg 111 Model Theory H D Ebbinghaus IV Recursion Theory P G Hinman V Set Theory A R Blass VI ProofTheory Constructive Mathematics J E Kister D van Dalen A S Troelstra
