Population and Poverty in the Developing World Nancy Birdsall, 1980 **Population and Poverty in the Developing World** Massimo Livi-Bacci, Gustavo De Santis, 1999-04-01 The increasing gap between developed and developing world will be one of the most important themes of the 21st century The contributions contained in this volume take a multidisciplinary approach to the problem offering a comprehensive review of the theoretical issues and empirical findings that relate to the complex and multidirectional link between poverty and demographic behaviours and outcomes in the contemporary developing world The starting point of the volume is an exact definition of poverty The contributors go on to analyse in the detail its causes and effects both at the micro and macro level concentrating on those factors and consequences which relate more directly to the demographic sphere Population growth household structure and labour fertility AIDS urbanization migration and mortality are amongst the areas covered with the major themes discussed and elaborated in an introductory overview chapter *Population Matters* Nancy Birdsall, Allen C. Kelley, Steven Sinding, 2001-08-30 The effect of demography on economic performance has been the subject of intense debate in economics for nearly two centuries In recent years opinion has swung between the Malthusian views of Coale and Hoover and the cornucopian views of Julian Simon Unfortunately until recently data were too weak and analytical models too limited to provide clear insights into the relationship As a result economists as a group have not been clear or conclusive This volume which is based on a collection of papers that heavily rely on data from the 1980s and 1990s and on new analytical approaches sheds important new light on demographic economic relationships and it provides clearer policy conclusions than any recent work on the subject In particular evidence from developing countries throughout the world shows a pattern in recent decades that was not evident earlier countries with higher rates of population growth have tended to see less economic growth An analysis of the role of demography in the Asian economic miracle strongly suggests that changes in age structures resulting from declining fertility create a one time demographic gift or window of opportunity when the working age population has relatively few dependants of either young or old age to support Countries which recognize and seize on this opportunity can as the Asian tigers did realize healthy bursts in economic output But such results are by no means assured only for countries with otherwise sound economic policies will the window of opportunity yield such dramatic results Finally several of the studies demonstrate the likelihood of a causal relationship between high fertility and poverty While the direction of causality is not always clear and very likely is reciprocal poverty contributes to high fertility and high fertility reinforces poverty the studies support the view that lower fertility at the country level helps create a path out of poverty for many families *Population Matters* represents an important further step in our understanding of the contribution of population change to economic performance As such it will be a useful volume for policymakers both in developing countries and in international development agencies **Population and Poverty in the Developing World** Nancy Birdsall, 1980 **The**

Population Growth and Poverty in the Developing World Nancy Birdsall, 1980 Experience in China, Indonesia, Taiwan, Colombia, Korea, Sri Lanka, Cuba, and Costa Rica shows, however, that birth rates can fall rapidly in low-income groups and countries where basic health care, education, and low-cost or free family planning services are made widely available. Assuming that annual population growth averages 2.2 percent for 1975-2000, down from 2.5 percent for developing countries in 1960-75, and total income growth rises to 6.2 percent per year, the numbers of poor people are projected to decline to 600 million in 2000. An average 1.9 percent population growth rate, now considered more likely for developing countries, would further reduce the number. But slower than expected economic growth

in the 1980s could raise the number unless special efforts are made to ensure more equitable income distribution and improvements in services to the poor in developing countries *Encyclopedia of the Developing World* Thomas M. Leonard, 2013-10-18 A RUSA 2007 Outstanding Reference Title The Encyclopedia of the Developing World is a comprehensive work on the historical and current status of developing countries Containing more than 750 entries the Encyclopedia encompasses primarily the years since 1945 and defines development broadly addressing not only economics but also civil society and social progress Entries cover the most important theories and measurements of development relate historical events movements and concepts to development both internationally and regionally where applicable examine the contributions of the most important persons and organizations and detail the progress made within geographic regions and by individual countries **Human Development Report 1990** United Nations Development Programme, 1990 First in a series of annual reports this volume is about people and about how development enlarges their choices access to income long life knowledge political freedom personal security community participation and guaranteed human rights It measures human development not by the yardstick of income alone but by the human development index reflecting life expectancy literacy and command over resources to enjoy a decent standard of living The report analyzes the record of human development for the last three decades and the experience of 14 countries in managing economic growth and human development The volume concludes with human development indicators for more than 130 countries both developing and developed ISBN 0 19 306481 X pbk 15 95 **Finance & Development, March 2007** International Monetary Fund. McGregor,David Barker,Sally Lloyd-Evans,1998 Resource Sustainability and Caribbean Development follows on from Barker and McGregor s earlier edited volume Environment and Development in the Caribbean Geographical Perspectives 1995 and aims to focus more specifically on the theme of sustainability and to examine research contributions of geographers to problems of sustainability in the Caribbean region While the problems of environmental degradation have increased in recent decades the ability of Caribbean governments to cope with the consequences appears to have been eroded There is however a growing recognition within the region of the need for development strategies that focus on the social needs of the people yet simultaneously protect the fragile natural environment It is hoped that the research presented here will serve to inform the wider research and decision making community of the main problems associated with resource sustainability in the region and of some of the major research directions crucial to the alleviation of these problems Preface **World**

Development Report 2008 World Bank,2007-10-15 The world s demand for food is expected to double within the next 50 years while the natural resources that sustain agriculture will become increasingly scarce degraded and vulnerable to the effects of climate change In many poor countries agriculture accounts for at least 40 percent of GDP and 80 percent of employment At the same time about 70 percent of the world s poor live in rural areas and most depend on agriculture for their livelihoods World Development Report 2008 seeks to assess where when and how agriculture can be an effective instrument for economic development especially development that favors the poor It examines several broad questions How has agriculture changed in developing countries in the past 20 years What are the important new challenges and opportunities for agriculture Which new sources of agricultural growth can be captured cost effectively in particular in poor countries with large agricultural sectors as in Africa How can agricultural growth be made more effective for poverty reduction How can governments facilitate the transition of large populations out of agriculture without simply transferring the burden of rural poverty to urban areas How can the natural resource endowment for agriculture be protected How can agriculture s negative environmental effects be contained This year s report marks the 30th year the World Bank has been publishing the World Development Report **Development Centre Studies Securing Livelihoods for All Foresight for**
