This book is timely as more studies and reviews need to be reported about regenerating global polluted soil and the impacts on the environment the benefit of both biotic and abiotic structure thereby creating more awareness of environmental protection and sustainability Thus this book presents a vista to research on regeneration of lost resources in the soil and its impacts on the environment

where when and how agriculture can be an effective instrument for economic development especially development that favors the poor It examines several broad questions How has agriculture changed in developing countries in the past 20 years What are the important new challenges and opportunities for agriculture Which new sources of agricultural growth can be captured cost effectively in particular in poor countries with large agricultural sectors as in Africa How can agricultural growth be made more effective for poverty reduction How can governments facilitate the transition of large populations out of agriculture without simply transferring the burden of rural poverty to urban areas How can the natural resource endowment for agriculture be protected How can agriculture s negative environmental effects be contained This year s report marks the 30th year the World Bank has been publishing the World Development Report Resources in Education ,1981-02
