Population, Land Use, and Environment National Research Council, Division of Behavioral and Social Sciences and Education, Center for Economics, Governance, and International Studies, Committee on the Human Dimensions of Global Change, Panel on New Research on Population and the Environment, 2005-09-15 Population Land Use and Environment Research Directions offers recommendations for future research to improve understanding of how changes in human populations affect the natural environment by means of changes in land use such as deforestation urban development and development of coastal zones It also features a set of state of the art papers by leading researchers that analyze population land use environment relationships in urban and rural settings in developed and underdeveloped countries and that show how remote sensing and other observational methods are being applied to these issues This book will serve as a resource for researchers research funders and students *Analyzing Population and Land Use Change* Ankit Sikarwar, Aparajita Chattopadhyay, 2020-04-30 This multidisciplinary book discusses and scientifically analyzes issues related to population land use cover LULC and environmental transformations in the seven most populated cities in India Delhi Mumbai Kolkata Bangalore Chennai Hyderabad and Ahmedabad To do so it closely examines and compares the trends in selected population parameters including total population total number of households population density population growth rate percent of total population in slums and intercensal net migration over the past two decades Presenting the changes in various LULC categories built up land forest cover agricultural land fallow land and water bodies using the supervised classification of Landsat TM 5 images it assesses the impact of population and LULC on the maximum and minimum temperatures and average annual rainfall in these regions The book is a valuable resource for researchers and academics in the areas of sustainability population and development and environmental studies as well as those in NGOs and humanitarian sectors working in the areas of sustainable development and environment **Ecologies and Politics of Health** Brian Hastings King, Kelley A. Crews, 2013 Human health exists at the interface of environment and society Decades of work by researchers practitioners and policy makers has shown that health is shaped by a myriad of factors including the biophysical environment climate political economy gender social networks culture and infrastructure Yet while there is emerging interest within the natural and social sciences on the social and ecological dimensions of human disease and health there have been few studies that address them in an integrated manner *Ecologies and Politics of Health* brings together contributions from the natural and social sciences to examine three key themes the ecological dimensions of health and vulnerability the socio political dimensions of human health and the intersections between the ecological and social dimensions of health The thirteen case study chapters collectively present results from Africa Asia Latin America the United States Australia and global cities Section one interrogates the utility of several theoretical frameworks and conventions for understanding health within complex social and ecological systems Section two concentrates upon empirically grounded and quantitative work that

collectively redefines health in a more expansive way that extends beyond the absence of disease Section three examines the role of the state and management interventions through historically rich approaches centering on both disease and non disease related examples from Latin America Eastern Africa and the United States Finally Section four highlights how health vulnerabilities are differentially constructed with concomitant impacts for disease management and policy interventions This timely volume advances knowledge on health environment interactions disease vulnerabilities global development and political ecology It offers theoretical and methodological contributions which will be a valuable resource for researchers and practitioners in geography public health biology anthropology sociology and ecology

New Perspectives on Agri-environmental Policies Stephan J Goetz, Floor Brouwer, 2009-10-20 Significant advances have occurred in recent years in Europe and in North America in addressing agri environmental policies but whilst important institutional and legal differences still exist between the two continents the sharing of recent scientific advances will benefit scientists on both sides of the Atlantic This is the main purpose of this book

Michael J Paolisso Eleonora Rohland Karin Sch rmann Bernd Sommer Kenneth M Sylvester Anne Marie Todd Richard Tucker and Sam White *The Environmental Advantages of Cities* William B. Meyer, 2013-03-15 An analysis that offers evidence to challenge the widely held assumption that urbanization and environmental quality are necessarily at odds Conventional wisdom about the environmental impact of cities holds that urbanization and environmental quality are necessarily at odds Cities are seen to be sites of ecological disruption consuming a disproportionate share of natural resources producing high levels of pollution and concentrating harmful emissions precisely where the population is most concentrated Cities appear to be particularly vulnerable to natural disasters to be inherently at risk from outbreaks of infectious diseases and even to offer dysfunctional and unnatural settings for human life In this book William Meyer tests these widely held beliefs against the evidence Borrowing some useful terminology from the public health literature Meyer weighs instances of urban penalty against those of urban advantage He finds that many supposed urban environmental penalties are illusory based on commonsense preconceptions and not on solid evidence In fact greater degrees of urbanness often offer advantages rather than penalties The characteristic compactness of cities for example lessens the pressure on ecological systems and enables resource consumption to be more efficient On the whole Meyer reports cities offer greater safety from environmental hazards geophysical technological and biological than more dispersed settlement does In fact the city defining characteristics widely supposed to result in environmental penalties do much to account for cities environmental advantages As of 2008 according to U N statistics more people live in cities than in rural areas Meyer s analysis clarifies the effects of such a profound shift covering a full range of environmental issues in urban settings

Moran, 2018-05-04 Designed to help students understand the multiple levels at which human populations respond to their surroundings this essential text offers the most complete discussion of environmental physiological behavioral and cultural adaptive strategies available Among the unique features that make Human Adaptability outstanding as both a textbook for students and a reference book for professionals are a complete discussion of the development of ecological anthropology and relevant research methods the use of an ecosystem approach with emphasis on arctic high altitude arid land grassland tropical rain forest and urban environments an extensive and

updated bibliography on ecological anthropology and a comprehensive glossary of technical terms Entirely new to the third edition are chapters on urban sustainability and methods of spatial analysis with enhanced emphasis throughout on the role of gender in human adaptability research and on global environmental change as it affects particular ecosystems In addition new sections in each chapter guide students to websites that provide access to relevant material complement the text s coverage of biomes and suggest ways to become active in environmental issues Human Adaptability, Student Economy Edition Emilio Moran,2018-10-03 This book focuses on mechanisms of human adaptability It integrates findings from ecology physiology social anthropology and geography around a set of problems or constraints posed by human habitats *Putting People on the Map* National Research Council,Division of Behavioral and Social Sciences and Education,Committee on the Human Dimensions of Global Change,Panel on Confidentiality Issues Arising from the Integration of Remotely Sensed and Self-Identifying Data,2007-02-22 Precise accurate spatial information linked to social and behavioral data is revolutionizing social science by opening new questions for investigation and improving understanding of human behavior in its environmental context At the same time precise spatial data make it more likely that individuals can be identified breaching the promise of confidentiality made when the data were collected Because norms of science and government agencies favor open access to all scientific data the tension between the benefits of open access and the risks associated with potential breach of confidentiality pose significant challenges to researchers research sponsors scientific institutions and data archivists Putting People on the Map finds that several technical approaches for making data available while limiting risk have potential but none is adequate on its own or in combination This book offers recommendations for education training research and practice to researchers professional societies federal agencies institutional review boards and data stewards

Environment and Society Charles Harper,2015-08-26 This book discusses human connections and impacts on the environment and vice versa and examines suggestions for changing the human environment relationship to a more sustainable environment It provides students and interested readers with an introduction to environmental issues *Facing Global Environmental Change* Hans Günter Brauch,Navnita Chadha Behera,Patricia Kameri-Mbote,John Grin,Úrsula Oswald Spring,Béchir Chourou,Czeslaw Mesjasz,Heinz Krummenacher,2009-06-04 The year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth sessment Report AR4 of the Intergovernmental Panel on Climate Change IPCC which were disseminated on a large scale and reported extensively by the media This was the result not only of a heightened interest on the part of the public on various aspects of climate change but also because the IPCC itself proactively attempted to spread the findings of its AR4 to the public at large The interest generated on the scientific realities of climate change was further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US Al Gore By taking this decision in favour of a leader who

has done a great deal to create awareness on climate change and a body that assesses all scientific aspects of climate change and disseminates the result of its findings the Norwegian Nobel Committee has clearly drawn the link between climate change and peace in the world
