Population Pressure And Cultural Adjustment:

Population Pressure and Cultural Adjustment Virginia Deane Abernethy, 2018-04-17 Integrating research from anthropology biology and history this provocative brilliant book proposes a theory of demographic equilibrium The author's hypothesis is that human beings like many other species are able to adjust their population numbers to the carrying capacity of the environment Abernethy points out that in response to perception of scarcity or abundance of resources culturally mediated values beliefs and behavioral patterns are modified in ways that can either raise or lower rates of population growth Abernethy in this way moves beyond the ideological debates that have sundered the field of policy and population In real world time and space cultural adjustments that balance population and resources are made over a long stretch in relatively stable or known environments These adjustments also operate in processes that involve technological advances that appear to increase carrying capacity and these usually act to support and underwrite population growth in any given area In her new introduction to this first paperback edition Abernethy shows how many of the cultural changes the book predicted in 1979 have come to pass She details a complex of behaviors that favor single life styles or small family size that have contributed to low fertility rates among native born Americans while fertility rates among immigrants continue to climb Population Pressure and Cultural Adjustment is not simply a theoretical slogan but discusses a rich set of different cultural situations where this homeostatic process has been disrupted or aborted Often disruption occurs after the infusion of foreign value systems as well as new forms of technological innovation or when highly permeable social boundaries result in the importation of resources for which the limits and consequences are not fully appreciated by the host population This work will inevitably be controversial because of its implications for the limits as well as the potential of public policy in both advanced and underdeveloped societies

climb Population Pressure and Cultural Adjustment is not simply a theoretical slogan but discusses a rich set of different cultural situations where this homeostatic process has been disrupted or aborted Often disruption occurs after the infusion of foreign value systems as well as new forms of technological innovation or when highly permeable social boundaries result in the importation of resources for which the limits and consequences are not fully appreciated by the host population This work will inevitably be controversial because of its implications for the limits as well as the potential of public policy in both advanced and underdeveloped societies Virginia Deane Abernethy is professor emeritus of Psychiatry Anthropology at Vanderbilt University School of Medicine She is the author of *Population Politics* with an introduction by Garrett Hardin and issued by Transaction Publishers in 2000 *Population Politics* Virginia Abernethy, Garrett Hardin, 2018-05-11 International efforts to regulate fertility rates so that populations do not grow beyond the earth's capacity have included technical assistance and capital improved health care conditions to lower the risk of infant mortality increased opportunities to develop literacy the democratization of governments and several decades of liberal immigration and refugee policies favoring third world nations The persistence of high fertility despite international efforts confounds demographers *Population Politics* brilliantly dissects the paradigm responsible for the counterproductive efforts of nations and international agencies Abernethy a renowned anthropologist shows why policies hamper the shift to lower fertility Ireland Indonesia Cuba China Turkey and Egypt are but a few of the countries Abernethy examines showing how economic sociocultural and agricultural factors that have caused population growth can be harnessed to stabilize population size *Population Politics* is a provocative examination of the influence of aid and liberal immigration policies on world population growth and often counterproductive to the role of the United States as an industrial power This volume's uniquely interdisciplinary perspective will enlighten the lay reader as well as demographers and epidemiologists conservationists reproduction and family specialists agricultural economists and public health personnel Virginia D Abernethy is professor emeritus of psychiatry anthropology at Vanderbilt Medical School and was for 11 years the editor of the scholarly journal *Population and Environment* Garrett Hardin is emeritus professor of human ecology in the Department of Biological Sciences and the University of California Santa Barbara

Procreation and Population in Historical Social Science Daniela Danna, 2021-08-03 The book sees procreation the forgotten basis of population dynamics and its macrohistorical results through the lenses of world system analysis in a nondogmatic way This interdisciplinary book sheds light on the historical paths leading to the current unprecedented numbers of humans on the globe fuelled by the capitalist demand for labor and mediated by the role of women in society *Procreation and Population* is a critical text opposing the current disciplinary fences that demonstrably hinder our comprehension of social phenomena Attentive to gender relations the book boldly tracks the big picture of population dynamics and its most reliable theories in times of postmodernist taboos on generalizations and on the search for the historical laws of human society *The Vanishing American Dream* Virginia Deane Abernethy, 2017-09-08 The United States

has gone off track allowing domestic and foreign aid policies to be co-opted by a government abetted by mass media that serves special interests rather than the greater national good. Americans' tendencies to trust, play fair, and help have been abused and require replacement by a realistic outlook. The Vanishing American Dream posits solutions to get America back on the right track. Abernethy sees population growth driven by mass immigration as a major cause of economic and cultural changes that have been detrimental to most Americans. The environment has been degraded by over-crowding and increasing demands on natural resources. Work is cheapened by explosive growth in the labour force creating a buyer's market. One salary or wage no longer supports a family and educates children. Women working outside the home is a necessity, not a choice, for most American families. Furthermore, feminism aimed originally at balanced gender roles has been turned viciously against males of all ages and ultimately against females through degrading their traditional and valuable contributions. Abernethy proposes that Americans need time to regroup, untroubled by a continuing influx of foreign peoples. The family, small business, and responsive local government are centres around which a solvent and confident citizenry can prosper again.

Demographic Transition Theory John C. Caldwell, 2007-09-21. This book has a strong theoretical focus and is unique in addressing both mortality and fertility over the full span of human history. It examines the demographic transition in the change in the human condition from high mortality and high fertility to low mortality and low fertility. It asks if fluctuating populations is a new phenomenon or if there has long been an inherent tendency in Man to maximize survival and to control family size.

On the Edge of Scarcity Michael N. Dobkowski, Isidor Wallimann, 2002-02-01. Modernization and industrialization have presented the human race with many problems inflicting deprivation, poverty, war, and premature death on millions of people. Until recently, however, solutions were achievable. Drawn from the much acclaimed *Coming Age of Scarcity* and adapted here for general classroom use, this work will be an ideal introduction to courses in population, environment, and resources, genocide studies, and social conflict. As we enter the twenty-first century, several components converge: namely, population, land for cultivation, energy, resources, and environmental carrying capacity. Michael N. Dobkowski and Isidor Wallimann establish a realistic projection of the disastrous future that awaits humankind as surplus populations collide with dwindling resources. Scholars from a variety of disciplines investigate the problems and suggest ways to maximize individual and collective survival, discussing cause and effect scenarios concerning industrialization, biophysical limits, exponential population growth, and genocide.

Demography, Territory & Law: Rules of Animal & Human Populations Sheila Newman, 2011-11-29. Newman shows how one land tenure and inheritance system can doom us to overpopulation and poverty, while the other system can and does promote steady-state economies. Back cover.

The Origins of Agriculture David Rindos,2013-10-22 The Origins of Agriculture An Evolutionary Perspective presents an alternative approach to understanding cultural variation and change It aims to demonstrate that domestication and the origin of agricultural systems are best understood by attempting to explicate the evolutionary forces that affected that development of domesticates and agricultural systems The book begins by discussing cultural change the domestication of plants and the origin of agricultural systems in the most general of terms It considers Darwinism in some depth concentrating on the relationship between natural selection and cultural change Subsequent chapters examine the world of domestication and agriculture and present a series of concepts that may permit a more natural explanation for these processes These include concepts such as incidental domestication specialized domestication and agricultural domestication The final two chapters present models for the origin and spread of agricultural systems based upon Darwinian evolutionary theory

The Conditions of Agricultural Growth Ester Boserup,2017-07-12 This book sets out to investigate the process of agrarian change from new angles and with new results It starts on firm ground rather than from abstract economic theory Upon its initial appearance it was heralded as a small masterpiece which

economic historians should read and not simply quote Giovanni Federico Economic History Services The Conditions of Agricultural Growth remains a breakthrough in the theory of agricultural development In linking ethnography with economy developmental studies reached new heights Whereas development had been seen previously as the transformation of traditional communities by the introduction or imposition of new technologies Ester Boserup argues that changes and improvements occur from within agricultural communities and that improvements are governed not simply by external interference but by those communities themselves Using extensive analyses of the costs and productivity of the main systems of traditional agriculture Ester Boserup concludes that technical economic and social changes are unlikely to take place unless the community concerned is exposed to the pressure of population growth **American Demographics** ,1979

Anthropology and Contemporary Human Problems John H. Bodley,2012-04-12 We live in a time of global mega problems of unsustainable growth and consumption resource depletion ecosystem degradation global warming escalating energy costs poverty and conflict Cultural anthropologist John H Bodley trenchantly critiques these most pressing issues and shows how anthropology makes it possible to find solutions The focus on culture scale suggests that many solutions may be found by developing local communities supported by regional markets and ecosystems rather than by making the continuous accumulation of financial capital the dominant cultural process throughout the world Now in its sixth edition this classic textbook continues to have tremendous relevance and is more timely than ever in light of the recent global economic crisis It exposes readers to the problems of a world out of balance with misdirected growth by the elite Bodley offers examples from prehistoric and modern tribal societies along side of ancient imperial and contemporary commercial societies Students will find this to be the trusted source to build a world view Anthropology and Contemporary Human Problems is ideal for adoption in anthropology and sociology courses on globalization cultural ecology social class and inequality the environment sustainability and development **Asian & Worldwide Documents on Population Topics** ,1979
