The Health of Aging Hispanics Jacqueline L. Angel, Keith E. Whitfield, 2007-08-06 The emergence of the Hispanic population in the United States and the increasing profile of Latin America on the North and South American continents have raised the profile of Latino issues in the American consciousness Much of this attention however has revolved around trends in culture art food and music or pathological concerns about poverty crime drugs and immigration At best the scholarly and policy assessments of the implications of the impact of Latinos in the United States revolve around Mexican Americans Puerto Ricans and Central Americans as well as the children of an older Cuban population and their struggles to achieve a measure of education healthcare employment and civil rights What have not been adequately addressed are the demographic trends affecting Latinos in the United States Mexico and Latin America particularly the aging of the Hispanic population and its resultant health and long term care needs That Latinos are living longer and shifting from a youthful population to an increasingly older cohort is little known except among the small cadre of Hispanic gerontologists Ironically this invisibility of aging Hispanics is juxtaposed to the almost picked response of the U.S. media and public toward the aging of the general U.S. population and the social and political controversies over Social Security Medicare and health care costs The policy debates of an aging U.S. population as a whole arise from substantial research and policy analysis a level of attention not seen with regard to the aging of the Hispanic population
