

in *Conrad Younger*," Section IV). Mortality rate is, of course, one of the basic dynamic characterizations of populations (along with migration and fertility), while the age of a population is one of its structural or compositional characteristics, so we have in this paper a clear illustration of demographic analysis (some writers have called this formal demography).

By contrast, population studies are those that examine the influence of some non-demographic characteristic on a demographic variable (such as migration, mortality, fertility, age structure). As Hanner indicates, the non-demographic characteristics may come from a variety of other "systems of variables," so that two quite different independent variables might be employed to explain variations in the same demographic variable. As a sample illustration, differences in fertility or changes in fertility may be explained by differences in family structure or marriage customs (sociological variables), fears and stereotypes about birth-control techniques (psychological variables), differences in fecundity (a biological variable—fecundity is defined as the biological capacity to reproduce and is probably influenced by such things as diet, health, heredity, etc.).

Hanner, in this introductory paper, notes that non-demographers may also use demographic factors in their studies. The non-demographer may use a population factor as an independent variable to show the influence that it may have on a non-demographic variable. For example, a political scientist could examine the age structure of a population to determine what effect it might have on the voting behavior of the group. Strictly speaking, this is not demography, but for convenience we may consider it one kind of population study. We might then have population studies type I, where other systems of variables are used to explain variations in demographic variables, and population studies type II, where demographic variables are used to explain variations in other systems of variables.

Following these distinctions, it will be clear that we have treated toward the selection of these articles that would be labeled population study type I, and have chosen papers where the independent variables most often come from the social and cultural realm, sometimes from the psychological realm.

In his paper on the relationship between sociology and demography, Hanner goes on to emphasize "that there is no logical reason why demography should be more closely related to sociology than to

**Measurement in the Social Sciences** Richard A. Zeller, Edward G. Carmines, 1980-04-30 This textbook is designed to bridge the gap between the theorist and the methodologist by presenting an integrated approach to measurement By

differentiating between random and systematic error it conveys both statistical techniques and their theoretical underpinnings essential to students of sociology and political science Rather than developing new technical methods of new theoretical structures Professors Zeller and Carmines provide thorough explanations of the assumptions limitations and interpretations of previously established techniques and theories Written at a level accessible to students of social science with some statistical training the book does not presume a sophisticated mathematical background By concentrating on synthesizing the methodological and theoretical realms Zeller and Carmines demonstrate why measurement considerations are important to research and how measurement principles can be most effectively applied      **Population** William

Petersen,1975      **Fertile Matters** Elena R. Guti  rrez,2009-06-03 While the stereotype of the persistently pregnant Mexican origin woman is longstanding in the past fifteen years her reproduction has been targeted as a major social problem for the United States Due to fear fueled news reports and public perceptions about the changing composition of the nation s racial and ethnic makeup the so called Latinization of America the reproduction of Mexican immigrant women has become a central theme in contemporary U S politics since the early 1990s In this exploration Elena R Guti  rrez considers these public stereotypes of Mexican American and Mexican immigrant women as hyper fertile baby machines who breed like rabbits She draws on social constructionist perspectives to examine the historical and sociopolitical evolution of these racial ideologies and the related beliefs that Mexican origin families are unduly large and that Mexican American and Mexican immigrant women do not use birth control Using the coercive sterilization of Mexican origin women in Los Angeles as a case study Guti  rrez opens a dialogue on the racial politics of reproduction and how they have developed for women of Mexican origin in the United States She illustrates how the ways we talk and think about reproduction are part of a system of racial domination that shapes social policy and affects individual women s lives      **Fertility Policy in Israel** Jacqueline Portugese,1998-08-30

Kammeyer,1971      *The Skeptical Environmentalist* Bjørn Lomborg,2001 *The Skeptical Environmentalist* challenges widely held beliefs that the environmental situation is getting worse and worse The author himself a former member of Greenpeace is critical of the way in which many environmental organisations make selective and misleading use of the scientific evidence Using the best available statistical information from internationally recognised research institutes Bjørn Lomborg systematically examines a range of major environmental problems that feature prominently in headline news across the world His arguments are presented in non technical accessible language and are carefully backed up by over 2500 footnotes allowing readers to check sources for themselves Concluding that there are more reasons for optimism than pessimism Bjørn Lomborg stresses the need for clear headed prioritisation of resources to tackle real not imagined problems *The Skeptical Environmentalist* offers readers a non partisan stocktaking exercise that serves as a useful corrective to the more alarmist accounts favoured by campaign groups and the media

**Beyond the Century of the Child** Willem Koops,Michael Zuckerman,2012-10-30 In 1900 Ellen Key wrote the international bestseller *The Century of the Child* In this enormously influential book she proposed that the world's children should be the central work of society during the twentieth century Although she never thought that her century of the child would become a reality in fact it had much more resonance than she could have imagined The idea of the child as a product of a protective and coddling society has given rise to major theories and arguments since Key's time For the past half century the study of the child has been dominated by two towering figures the psychologist Jean Piaget and the historian Philippe Ariès Interest in the subject has been driven in large measure by Ariès's argument that adults failed even to have a concept of childhood before the thirteenth century and that from the thirteenth century to the seventeenth there was an increasing childishness in the representations of children and an increasing separation between the adult world and that of the child Piaget proposed that children's logic and modes of thinking are entirely different from those of adults In the twentieth century this distance between the spheres of children and adults made possible the distinctive study of child development and also specific legislation to protect children from exploitation abuse and neglect Recent students of childhood have challenged the ideas those titans promoted they ask whether the distancing process has gone too far and has begun to reverse itself In a series of essays *Beyond the Century of the Child* considers the history of childhood from the Middle Ages to modern times from America and Europe to China and Japan bringing together leading psychologists and historians to question whether we unnecessarily infantilized children and unwittingly created a detrimental wall between the worlds of children and adults Together these scholars address the question whether a hundred years after Ellen Key wrote her international sensation the century of the child has in fact come to an end
