## Portable Ladders:

Electrotechnology Practice Steven Hanssen, Jeffery Hampson, 2023-03-28 Electrotechnology Practice is a practical text that accompanies Hanssen Hampson's theoretical Electrical Trade Principles. It covers essential units of competency for the Certificate III in Electrotechnology Electrician UEE30820. Aligned with the latest Australian and New Zealand standards, the text references the Wiring Rules AS/NZS 3000:2018 and follows the uniform structure and system of delivery as recommended by the nationally accredited vocational education and training authorities. More than 1000 illustrations convey to the learner various concepts and real-world aspects of electrical practices, a range of fully worked examples including engineering mathematical fundamentals and review questions support student learning while assessment-style worksheets support the volume of assessment. Electrotechnology Practice has strong coverage of the electives for Certificate II and Certificate III, preparing students to eligibly sit for the Capstone Assessment or the Licensed Electrician's Assessment LEA as a mandatory requirement to apply for an Electrician's Licence. Premium online teaching and learning tools are available on the MindTap platform. *Portable Ladders*, 2017 *Means of Access for Enclosed Spaces* Alexander Arnfinn

Olsen, 2025-05-02 This book provides critical information relating to the design and construction of means of access onboard marine vessels and platforms including ladders, walkways and ramps, hatches and alternative access points. Uniquely, this book highlights the importance of considering human factors and ergonomics in engineering design. In support of the Statutory and IACS guidance, this book has been written to provide graphical illustrations and additional textual clarification of the means of access requirements. The goal is to improve the comprehension and application of the Statutory and IACS guidance. Conceptually, this text presents two levels of means of access guidance. The first provides the base criteria to meet the IMO requirements. The second and preferred level of guidance incorporates the application of current ergonomics practices to the means of access requirements. The application of ergonomics to the means of access requirements will enhance levels of safety as well as quality of work by providing appropriate access for survey, inspection and maintenance activities for tanks and holds.
