Portal Language Description Lecture Notes In Computer Science Volume 198 Second Extended Edition:

PORTAL Language Description Arnold Businger,1988-03-23 **Mathematical Foundations of Programming Language Semantics** Michael Main,Austin Melton,Michael Mislove,David Schmidt,1988-03-09 This volume is the proceedings of the 3rd Workshop on the Mathematical Foundations of Programming Language Semantics held at Tulane University New Orleans Louisiana April 8 10 1987 The 1st Workshop was at Kansas State University Manhattan Kansas in April 1985 see LNCS 239 and the 2nd Workshop with a limited number of participants was at Kansas State in April 1986 It was the intention of the organizers that the 3rd Workshop survey as many areas of the Mathematical Foundations of Programming Language Semantics as reasonably possible The Workshop attracted 49 submitted papers from which 28 papers were chosen for presentation The papers ranged in subject from category theory and Lambda calculus to the structure theory of domains and power domains to implementation issues surrounding semantics **Parallel Computing in Science and Engineering** Rüdiger Dierstein,Dieter Müller-Wichards,Hans-Martin Wacker,1988-05-11 It was the aim of the conference to present issues in parallel computing to a community of potential engineering scientific users An overview of the state of the art in several important research areas is given by leading scientists in their field The classification question is taken up at various points ranging from parametric characterizations communication structure and memory distribution to control and execution schemes Central issues in multiprocessing hardware and operation such as scalability techniques of overcoming memory latency and synchronization overhead as well as fault tolerance of communication networks are discussed The problem of designing and debugging parallel programs in a user friendly environment is addressed and a number of program transformations for enhancing vectorization and parallelization in a variety of program situations are described Two different algorithmic techniques for the solution of certain classes of partial differential equations are discussed The properties of domain decomposition algorithms and their mapping onto a CRAY XMP type architecture are investigated and an overview is given of the merit of various approaches to exploiting the acceleration potential of multigrid methods Finally an abstract performance modeling technique for the behavior of applications on parallel and vector architectures is described **Supercomputing** ,1988 Trends in Computer Algebra Rainer Janßen,1988-02-22 This is the proceedings volume of the symposium entitled Trends in Computer Algebra held in Bad Neuenahr May 19 21 1987 Computer algebra is a very active research area on the borderline between mathematics and computer science which will strongly influence mathematical and physical research in the near future The intention of this symposium was to bring together specialists in computer algebra with researchers in related areas of mathematics and computer science as well as potential users of the developed tools and techniques in order to discuss present issues and future trends of this topic The thirteen invited talks of the symposium were organized into the following groups Languages and Systems Symbolic Computations Computing in Algebraic Structures and Applications **Books in Series** ,1985 Vols for 1980 issued in three parts Series

Authors and Titles   STACS 88 Robert Cori,Martin Wirsing,1988-01-27 This volume contains the presentations of the Fifth Symposium on Theoretical Aspects of Computer Science STACS 88 held at the University of Bordeaux February 11 13 1988 In addition to papers presented in the regular program the volume contains abstracts of software systems demonstrations which were included in this conference series in order to show applications of research results in theoretical computer science The papers are grouped into the following thematic sections algorithms complexity formal languages rewriting systems and abstract data types graph grammars distributed algorithms geometrical algorithms trace languages semantics of parallelism   **American Book Publishing Record** ,1985   *MetaSoft Primer* Andrzej Blikle,1987-11-25 The book is devoted to a simplified set theoretic version of denotational semantics where sets are used in place of Scott s reflexive domains and where jumps are described without continuations This approach has emerged as a reaction to the sophisticated model of traditional semantics It was also strongly stimulated by the applications of denotational semantics and especially by its software industry oriented version known as VDM Vienna Development Method The new approach was successfully tested on several examples Based on this approach the Polish Academy of Sciences created the project MetaSoft aimed at the development of a definitional metalanguage for software engineering The approach has also been chosen in the project RAISE ESPRIT which aims at a similar goal The book consists of two parts Part One is devoted to the mathematical foundations of the future definitional metalanguage of MetaSoft This part also introduces an appropriate notation Part Two shows the applications of this metalanguage There the denotational definition of a subset of Pascal is discussed with particular emphasis on Pascal types   *A Connotational Theory of Program Structure* James S. Royer,1987-08-26 This book presents developments of a language independent theory of program structure The theory features a simple natural notion of control structure which is much broader than in other theories of programming languages such as denotational semantics and program schemes This notion permits treatment of control structures which involve not only the denotation of programs i e their input output behavior but also their structure size run times etc The theory also treats the relation of control structure and complexity properties of programming languages The book focuses on expressive interdependencies of control structures which control structures can be expressed by which others A general method of proving control structures expressively independent is developed The book also considers characterizations of the expressive power of general purpose programming languages in terms of control structures Several new characterizations are presented and two compactness results for such characterizations are shown   Systems of Reductions Benjamin Benninghofen,Susanne Kemmerich,Michael M. Richter,1987-11-25   *Connected Computing Environment* ,2012-12-02 Since its first volume in 1960 Advances in Computers has presented detailed coverage of innovations in computer hardware software theory design and applications It has also provided contributors with a medium in which they can explore their subjects in greater depth and breadth than journal articles usually allow As a result many articles have become standard references that continue to be of sugnificant

lasting value in this rapidly expanding field In depth surveys and tutorials on new computer technology Well known authors and researchers in the field Extensive bibliographies with most chapters Many of the volumes are devoted to single themes or subfields of computer science   Global Dynamics of the Earth Roberto Sabadini,Bert Vermeersen,2004-04-30 This volume opens up new perspectives on the physics of the Earth s interior for graduate students and researchers working in the fields of geophysics and geodesy It looks at our planet in an integrated fashion linking the physics of its interior to the geophysical and geodetic techniques that record over a broad spectrum of spatial wavelengths the ongoing modifications in the shape and gravity field of the planet Basic issues related to the rheological properties of the Earth s mantle and to its slow deformation will be understood in both mathematical and physical terms within the framework of an analytical normal mode relaxation theory Fundamentals of this theory are developed in the first tutorial part The second part deals with a wide range of applications ranging from changes in the Earth s rotation to post seismic deformation and sea level variations induced by post glacial rebound In the study of the physics of the Earth s interior the book bridges the gap between seismology and geodynamics   Forthcoming Books Rose Arny,1989-05   Supercomputers Stephen Winter,Harald Schumny,1988   ESEC ... ,1987   Category Theory and Computer Science David H.
