McCallister,2022-03-28 In *A Pedagogical Design for Human Flourishing Transforming Schools with the McCallister Model* Cynthia McCallister presents a revolutionary paradigm for education that is practical conceptually convincing and grounded in contemporary behavioral science theory Beginning with the assertion that equality of educational opportunity depends on access to experiences that are sufficiently appropriate and rich to enable the achievement of diverse human potentials she provides a comprehensive school design for intervention that demonstrates how to achieve it Grounded in recent advances in learning science McCallister asserts three necessary conditions for learning the need for learners to have access to diverse rich environmental experiences the need for them to enjoy fundamental freedom and autonomy to direct their own learning and access to full and free forms of association In her model these conditions provide what is necessary for learners to coordinate their minds with others to develop their identities personalities and talents These conditions are animated in concrete procedures that can be adapted to a wide variety of populations in formal informal and remote educational settings The procedures take the form of rules that learners comply with in the exercise of their freedom When they are followed the rules provide a grammar for the social norms that govern the moral worlds of learners and compel them to flourish Tested over two decades in her work as a teacher scholar and school reformer in more than 20 NYC public schools the McCallister Method has delivered an innovative and disruptive approach to schooling that has proven successful in finally transforming low performing industrial schools into 21st century learning organizations Online support material includes assessments records surveys and more to be used in school design and classroom settings **ENC Focus** ,2000 *The Assessment*

**Grading Student Achievement in Higher Education** Mantz Yorke, 2007-09-12 A lot hangs on the summative grades that students are given A good degree opens doors which otherwise might remain closed Yet as higher education is now a mass rather than an elite system what is expected of its graduates is different from the expectations of previous generations Students are expected not only to be able to demonstrate high standards of academic achievement but also a variety of capabilities that have at different times been given labels such as generic skills and transferable skills These abilities are difficult to grade for a variety of reasons and some graduates may be losing out because their particular strengths are given insufficient acknowledgement in current summative assessment practices Using the UK honours degree classifications as a case study this book appraises the way in which summative assessment in higher education is approached and shows that the foundations of current practices in the UK and elsewhere are of questionable robustness It argues that there is a need to widen the assessment frame if the breadth of valued student achievements is to be recognised adequately **Teaching**
