Seismic Hazard Of The Circumpannonian Region:

Seismic Hazard of the Circum-Pannonian Region Giuliano F. Panza, Mircea Radulian, Czezar-I. Trifu, 2013-03-11 requiring the adaptation of probabilistic maps to design ground motions and the generalization of design parameters to locations where there is little seismic history Maximum displacements velocities and based on the European Building Code EC8 design ground acceleration maps have thus been produced by ZivCic et al for Slovenia Marku ic et al for Croatia Bus et al for Hungary and Radulian et al for Romania The last two contributions in the volume are dedicated to studies of local site effects that could affect the microzonation of large urban areas Moldoveanu et al employed a technique based on the modal summation and finite differences to calculate the expected ground motion in the capital city of Bucharest due to large intermediate depth Vrancea earthquakes Their results outline that the presence of alluvial sediments and the possible variation of event scenario require the use of all three components of motion for a reliable determination of the seismic input The study of Marmureanu et al more limited in scope offers a laboratory analysis of the attenuation effects for surface layers The authors confirm that seismic attenuation in sedimentary layers is a function of the strain levels induced by large earthquakes and find that the quality factor is nearly constant over a relatively wide frequency range between 7 and 100 Hz

Energy-Based Seismic Engineering Amadeo Benavent-Climent, Fabrizio Mollaioli, 2021-04-30 This volume gathers the latest advances innovations and applications in the field of seismic engineering as presented by leading researchers and engineers at the 1st International Workshop on Energy Based Seismic Engineering IWEBSE held in Madrid Spain on May 24-26 2021 The contributions cover a diverse range of topics including energy based EDPs damage potential of ground motion structural modeling in energy based damage assessment of structures energy dissipation demand on structural components innovative structures with energy dissipation systems or seismic isolation as well as seismic design and analysis Selected by means of a rigorous peer review process they will spur novel research directions and foster future multidisciplinary collaborations
