The Future of Translation

Technology Chan Sin-wai, 2016-10-26 Technology has revolutionized the field of translation, bringing drastic changes to the way translation is studied and done. To an average user, technology is simply about clicking buttons and storing data. What we need to do is to look beyond a system's interface to see what is at work and what should be done to make it work more efficiently. This book is both macroscopic and microscopic in approach: macroscopic as it adopts a holistic orientation when outlining the development of translation technology in the last forty years, organizing concepts in a coherent and logical way with a theoretical framework and predicting what is to come in the years ahead; microscopic as it examines in detail the five stages of technology-oriented translation procedure and the strengths and weaknesses of the free and paid systems available to users. The Future of Translation Technology studies among other issues: The Development of Translation Technology, Major Concepts in Computer-aided Translation, Functions in Computer-aided Translation Systems, A Theoretical Framework for Computer-aided Translation Studies, The Future of Translation Technology. This book is an essential read for scholars and researchers of translational studies and computational linguistics and a guide to system users and professionals.

reached as well as the recent development. She explains that cognitive studies of translation process examine the translation competence on line translation behaviors such as how the eye gazes and how the words are typed and the brain activities when doing translation. Special interests are paid to the working memory problem solving the executive function and some linguistic relative factors such as text difficulty. Over the past thirty years the interest in the field has been gaining considerable momentum and increasing issues have been involved. Finally she concludes that with the advancement of technologies and interdisciplinary approaches the black box the previously unforeseeable cognitive activities of how human process translation can be unfolded. Considering the importance of integrating theory with practice the proceedings are therefore compiled in such a way as to be balanced and inclusive in the hope of summarizing current accomplishments as well as providing certain insights for teaching and further research in the field of translation and interpretation studies.
