Causation in National and International Climate Change Litigation
Meike Krakau, 2025-03-05

This book presents a comprehensive analysis of causation in climate change litigation across a range of regional, national, and international legal jurisdictions. By doing so, it offers clarity and potential solutions for legal professionals, scholars, and courts navigating the complex legal terrain of climate change litigation. Constructing causal chains in climate litigation poses significant difficulties for the judicial system. Factual challenges range from causal overdetermination to the vast spatial and temporal scale of climate-related cause and effect relationships. Normative obstacles are posed, inter alia, by the multitude of greenhouse gas emitters and the wide range of climate-influencing practices. Drawing on diverse understandings of causation from various legal perspectives as well as from other disciplines such as computer science, metaphysics, and philosophy, this book provides a fundamental understanding of climatic causation in law. Further, it lays the groundwork and clarifies the requirements for the use and development of continuous causal chains in climate change litigation.
