illustrates how his lab successfully grew a retina from stem cells to A Sweet Solution for Replacing Organs in which Katherine Harmon describes how a speaker at a recent TED talk used a 3 D printer to create a kidney A century from now will the sight of an amputee be a rarity with cybernetic limbs controlled by thought and nearly indistinguishable from the biological ones Perhaps most people will have their genomes read for indications of future disease and take steps to prevent it or even to cure inherited disorders Will we replace some drugs with tiny machines fanning out inside the body to repair damage As exciting as these possibilities are to extend both the length and quality of life immortality or at least agelessness may be forever out of our reach As Thomas Kirkwood notes in his piece Why Can t We Live Forever death might be the price we pay for our complex biology Even so the doctors of a century past would surely be impressed by what medical science has accomplished in the past hundred years antibiotics organ transplants and the elimination of smallpox to name but a few The next century should be equally impressive and with the various types of new technologies on the horizon many of us have a good chance of seeing it happen
