Clinical Behavior Therapy with Children Thomas H. Ollendick, Jerome A. Cerny, 2013-03-08 As noted by its title the focus of this book is centered on an examination of behavior therapy with children in clinical settings Throughout our goal has been to examine theoretical underpinnings review empirical research and illustrate clinical utility for a variety of behavioral procedures with children In pursuing this goal we have described child behavior therapy as an approach based on empirical methodology derived from behavioral principles and focused upon adjustment disorders of children The hallmark of such an approach is its accountability the extent to which the procedures and techniques presented in this text are demonstrably accountable must be determined at least partially by the reader As students of child behavior we have become sensitized to two trends in behavior therapy with children during the preparation of this book First we have been concerned with the simple application of behavioral procedures to children irrespective of developmental considerations All too frequently assessment strategies and treatment procedures found to be useful with adults have been applied to children in an indiscriminate fashion For example some recent studies have examined and assessed the very same social skill deficits in children as in adults e g lack of eye contact delayed latency of response and absence of positive commendatory responses Surely skill deficits differ from age to age just as they differ from situation to situation
