problems of a world power the 20th century **World Economic Historical Statistics** Carlos Sabillon,2005 Since the earliest of times human beings have endeavored to uncover the causes of prosperity History is the best tool that society possesses for identifying and analyzing the factors that contribute to economic growth yet economic statistics that lend themselves to comparison are hard to come by Even academics who specialize in individual countries almost never present a set of statistics covering the whole 20th century and for the previous centuries the data is even more chaotic Here for the first time the economic statistics of the world are presented in a rationalized format that allows for an easy comparison across countries and through time Part One analyzes the most relevant ideas and theories that have been considered as causal variables of economic growth It summarizes these ideas pedagogically and tests them against the historical data The results of such analyses are highly troubling because they reveal an absence of correlation between theory and reality Part Two presents a collection of statistics illustrating the development of the world economy during the last centuries The data was extracted from economic history and economic history books from the publications of the World Bank the Organization for Economic Cooperation and Development the International Monetary Fund the World Trade Organization the United Nations specialized agencies research institutes and country statistical publications and other books and journals Analyzing the data over geography and time Sabillon concludes that contrary to contemporary wisdom left to market forces alone the economy will not and does not flourish The factors that cause growth he says still need to be studied with a fresh eye This orderly and consistent presentation of statistics may be just the tool that helps future economic theorists to identify a reliable path to sustained growth This analysis of the long term historical development of the nations of the world is the culmination of a fourteen year research project funded in part by the Swiss National Fund for Scientific Research the Graduate Institute of International Studies in Geneva Switzerland and by the Geneva Business Institute Carlos Sabillon has an advanced degree from the Institute of International Studies Geneva Switzerland in Economic History His book *Manufacturing Technology and Economic Growth* was published by M E Sharpe Inc 2000 *On the Causes of Economic Growth* Carlos Sabillon,2008 What is the secret Can policies grow the economy How do leaders make their countries prosper Since the earliest of times humans have endeavored to uncover the causes of prosperity Step by step Sabillon tests the principal theories on the causes of

economic growth against the facts of history Here for the first time the economic statistics of the world are presented in a rationalized format that allows for an easy comparison across countries and through time with a challenge to those who study them What do the statistics show and what are the trends beyond cherished theories that suit various political purposes Tested against the historical data textbook ideas and theories consistently come up short Such analyses are highly troubling because they reveal an absence of correlation between theory and reality The data statistics illustrating the development of the world economy during the last several centuries was extracted from economic history and economic history books from publications of the World Bank the Organization for Economic Cooperation and Development the International Monetary Fund the World Trade Organization the United Nations specialized agencies research institutes and country statistical publications and other books and journals Analyzing the data over geography and time Sabillon concludes that contrary to contemporary wisdom left to market forces alone the economy will not and does not flourish Only decisive intervention in support of manufacturing and technological advancement can provide growth This systematic review of history and test of accepted dogma challenges economic theorists to consider one part of the equation of economic policy that has been wiped off the blackboard in today s politically correct debates

Manufacturing, Technology, and Economic Growth Carlos Sabillon,2019-07-25 This book analyzes the development of economic events in Japan China the NICs Russia Germany Britain and the United States of America during the second half of the twentieth century in an effort to uncover the variables that were determinant for the generation of economic growth After analyzing numerous economic and non economic variables the author manages to identify a common denominator that was always present when there was growth and absent when there was stagnation A strong causality linkage is established between this common denominator and growth The book also demonstrates how this common set of variables can be easily manipulated by government policy in order to deliver fast and sustained economic growth The book concludes with a clear set of macroeconomic policies for the attainment of fast non inflationary growth in developing countries middle income nations transition economies and developed countries Despite its unorthodox position the book endorses free trade privatization liberalization fiscal rectitude low inflation central bank independence proper governance protection of the environment and better income distribution With this approach the book offers a fresh new look on the problem of growth and offers hope that economic science will finally provide governments with an effective policy tool for the elimination of poverty and unemployment

Conflict and Compromise Roger L. Ransom,1989-09-29 In this book Professor Roger Ransom examines the economic and political factors that led to the attempt by Southerners to dissolve the Union in 1860 and the equally determined effort of Northerners to preserve it Ransom argues that the system of capitalist slavery in the South not only caused the Civil War by producing tensions that could not be resolved by compromise it also played a crucial role in the outcome of that war by crippling the southern war effort at the same time that emancipation became a unifying issue for the North Ransom also carefully examines the impact that four years of war and the emancipation of slaves had both on the defeated South and the victorious North From publisher s description
