Accounting For Crises: A Marxist History Of American Accounting Theory, C.1929-2007 Rob Bryer,2023-07-07
Historians have not convincingly explained modern capitalism s two major economic crises the Great Depression of the 1930s

and the Global Financial Crisis GFC of 2008 2009 Accounting for Crises offers a new explanation why both began and were more severe in the USA America based on an accounting interpretation of Marx s theory of crises It explains their origins in capitalists control of accumulation which reveals important overlooked roles for Irving Fisher s accounting theory This theory by allowing discretion in accounts in the context of falling rates of profit encouraged swindling overstating reported profits and understating their risk which facilitated and aggravated both crises Framed by Fisher s theory during the 1920s American accounting theorists justified discretion which Creating the Big Mess the companion volume concluded it management used to conservatively smooth earnings Accounting for Crises shows that Fisher s theory also underlays the popular new theory of investment that justified valuing shares using reported earnings which encouraged their manipulation and legitimized speculation This it argues underlays America s exceptional late 1920s stock market boom the 1929 Great Crash and the depth and length of its Great Depression Prominently associated with the boom Fisher became unpopular after the crash his name disappearing from public debate Nevertheless the book concludes his theory hindered economic recovery weakened 1930s reforms undermined accounting regulation from the late 1930s and following his rehabilitation from the late 1950s underlies the Financial Accounting Standards Board s conceptual framework which by allowing off balance sheet accounting for securitization SPEs fostered the 2007 credit crunch that triggered the 2008 2009 Global Financial Crisis GFC
