

HEALTHCARE DECISION MAKERS & INFLUENCERS

Patient & Family Support

Patients make decisions in consultation with their doctors. But are influenced by their loved ones to seek more information and sometimes are encouraged to seek medical advice in the first place. Patients and their support groups play a strong role in healthcare decision making.

Doctors & Medical Groups

Doctors directly make and strongly influence medical decisions for their patients. However, medical groups often act in concert to provide improved patient outcomes and share learnings across the practice.

Critical Practice Setting Bodies

Large clinical practice setting bodies such as the National Comprehensive Cancer Network serve to provide collective best practices among (for example) urologists as they seek to screen prostate cancer. These bodies strongly influence healthcare decisions.

Payors (Insurance)

Insurance companies are another strong influence in the healthcare decision making process. If patients are unable to afford medication, procedures or medical devices because they are not covered or don't offer great coverage - patients may not seek the medical solution they need.

Regulatory Bodies

Regulatory bodies set standards for how drugs and medical devices should behave and what should happen when it performs outside expectations. Regulatory bodies influence both payors and doctors in their decision making process.

Making Decisions About Liability And Insurance

Benjamin van Rooij, D. Daniel Sokol

Making Decisions About Liability And Insurance:

Making Decisions About Liability And Insurance Colin F. Camerer, Howard Kunreuther, 2012-12-06 Two related trends have created novel challenges for managing risk in the United States The first trend is a series of dramatic changes in liability law as tort law has expanded to assign liability to defendants for reasons other than negligence The unpredictability of future costs induced by changes in tort law may be partly responsible for the second major trend known as the liability crisis the disappearance of liability protection in markets for particularly unpredictable risks This book examines decisions people make about insurance and liability An understanding of such decision making may help explain why the insurance crisis resulted from the new interpretations of tort law and what to do about it The articles cover three kinds of decisions consumer decisions to purchase insurance insurer decisions about coverage they offer and the decisions of the public about the liability rules they prefer which are reflected in legislation and regulation For each of these three kinds of decisions normative theories such as expected utility theory can be used as benchmarks against which actual decisions are judged

Choices, Values, and Frames Daniel Kahneman, Amos Tversky, 2000-09-25 This book presents the definitive exposition of prospect theory a compelling alternative to the classical utility theory of choice Building on the 1982 volume *Judgement Under Uncertainty* this book brings together seminal papers on prospect theory from economists decision theorists and psychologists including the work of the late Amos Tversky whose contributions are collected here for the first time While remaining within a rational choice framework prospect theory delivers more accurate empirically verified predictions in key test cases as well as helping to explain many complex real world puzzles In this volume it is brought to bear on phenomena as diverse as the principles of legal compensation the equity premium puzzle in financial markets and the number of hours that New York cab drivers choose to drive on rainy days Theoretically elegant and empirically robust this volume shows how prospect theory has matured into a new science of decision making

Environmental Regulation Through Financial

Organisations: Comparative Perspectives on the Industrialised Nations Benjamin Richardson, 2002-02-13 This book takes a comparative perspective of practice in the European Union North America Japan and Australasia arguing that existing legal reforms to promote sustainable development are unlikely to be successful unless environmental policy can be diffused and embedded in the financial services sector This sector plays a crucial role in creating the financial conditions that allow much economic development to proceed Financial markets are already highly regulated in pursuance of various public policy objectives and there is scope to adapt existing regulation to incorporate environmental aspects into the financial

services sector In terms of specific reforms the book focuses on the role of corporate environmental reporting economic instruments and liability rules to provide a proper context for engaging financial organisations with the environment as well as reforms to the system of prudential regulation that currently governs this sector Beyond the focus on the financial services sector the book raises complex questions regarding the relationship between the state and market institutions in environmental policy and will appeal to scholars from a wide range of disciplines interested in problems of environmental governance
