Harwood,National Cooperative Highway Research Program,2003      **Strategic Maneuvering in Argumentative Discourse** Frans H. van Eemeren,2010-05-19 In Strategic Maneuvering in Argumentative Discourse Frans H van Eemeren brings together the dialectical and the rhetorical dimensions of argumentation by introducing the concept of strategic maneuvering Strategic maneuvering refers to the arguer s continual efforts to reconcile aiming for effectiveness with being reasonable It takes place in all stages of argumentative discourse and manifests itself simultaneously in the choices that are made from the topical potential available at a particular stage in adaptation to audience demand and in the use of specific presentational devices Strategic maneuvering derails when in the specific context in which the discourse takes place a rule for critical discussion has been violated so that a fallacy has been committed Van Eemeren makes clear that extending the pragma dialectical approach to argumentation by taking account of strategic maneuvering leads to a richer and more precise method for analyzing and evaluating argumentative discourse      *Standardization and Data Management Newsletter* ,1989

*Continuing Kepler's Quest* National Research Council,Division on Engineering and Physical Sciences,Aeronautics and Space Engineering Board,Committee for the Assessment of the U.S. Air Force's Astrodynamic Standards,2012-10-06 In February 2009 the commercial communications satellite Iridium 33 collided with the Russian military communications satellite Cosmos 2251 The collision which was not the first recorded between two satellites in orbit but the most recent and alarming produced thousands of pieces of debris only a small percentage of which could be tracked by sensors located around the world In early 2007 China tested a kinetic anti satellite weapon against one of its own satellites which also generated substantial amounts of space debris These collisions highlighted the importance of maintaining accurate knowledge and the associated uncertainty of the orbit of each object in space These data are needed to predict close approaches of space objects and to compute the probability of collision so that owners operators can decide whether or not to

make a collision avoidance maneuver by a spacecraft with such capability The space object catalog currently contains more than 20 000 objects and when the planned space fence radar becomes operational this number is expected to exceed 100 000 A key task is to determine if objects might come closer to each other an event known as conjunction and the probability that they might collide The U S Air Force is the primary U S government organization tasked with maintaining the space object catalog and data on all space objects This is a complicated task involving collecting data from a multitude of different sensors many of which were not specifically designed to track orbiting objects and fusing the tracking data along with other data such as data from atmospheric models to provide predictions of where objects will be in the future The Committee for the Assessment of the U S Air Force s Astrodynamics Standards collected data and heard from numerous people involved in developing and maintaining the current astrodynamics standards for the Air Force Space Command AFSPC as well as representatives of the user community such as NASA and commercial satellite owners and operators Preventing collisions of space objects regardless of their ownership is in the national security interest of the United States Continuing Kepler s Quest makes recommendations to the AFSPC in order for it to create and expand research programs design and develop hardware and software as well as determine which organizations to work with to achieve its goals
