Making Of Rhodes:

Growth Growth Growth Julian Cobbing, 2024-04-11 *Growth Growth Growth* retells history as a succession of pivotal crises linked to economic growth Beginning with agriculture ten thousand years ago each crisis led to an impasse until human ingenuity devised a technical solution to fix it These solutions included the alphabet paper clocks guns the printing press the steam engine the petrol engine electricity nitrogen fertilizer and the computer Each solution however played a part in the next crisis Growth driven crises led to the world wars of the first half of the twentieth century including the atrocities of Stalin Hitler and Hiroshima The brief golden age of capitalism of the 1950s and 1960s gave way to the ultra corporate capitalism that in one variant or another is now the global economic system Julian Cobbing's lively account exposes the historical roots of our converging problems the destruction of the environment the massacre of other species the running down of oil reserves global heating and the nuclear threat to all of us This time there is no technical solution since we are devouring the Earth's finite resources Cobbing reminds us that we are just one species in a planetary life system which could dispense with us if we are not needed

Savannah River Site at Fifty Mary Beth Reed, 2002 The heart of the book is a historical treatment of Savannah River Site's operations its peak period of production 1953 to 1979 Developments in reactor technology and chemical separations heavy water production waste management and the research goals of the Savannah River Laboratory are described in layman's terms and are amply illustrated This history profiles the individuals who brought the plant to maturity and explores the two themes that define the nuclear weapons workplace safety and security

Downwind of the Atomic State James C. Rice, 2025-04 2024 Outstanding Academic Title given by Choice Reviews How the scientific community overlooked ignored and denied the catastrophic fallout of decades of nuclear testing in the American West In December of 1950 President Harry Truman gave authorization for the Atomic Energy Commission to conduct weapons tests and experiments on a section of a Nevada gunnery range Over the next eleven years more than a hundred detonations were conducted at the Nevada Test Site and radioactive debris dispersed across the communities just downwind and through much of the country In this important work James C Rice tells the hidden story of nuclear weapons testing and the negligence of the US government in protecting public health *Downwind of the Atomic State* focuses on the key decisions and events shaping the Commission's mismanagement of radiological contamination in the region specifically on how the risks of fallout were defined and redefined or importantly not defined at all owing to organizational mistakes and the impetus to keep atomic testing going at all costs Rice shows that although Atomic Energy Commission officials understood open air detonations injected radioactive debris into the atmosphere they did not understand or seem to care that the radioactivity would irrevocably contaminate these communities The history of the atomic Southwest should be a wake up call to everyone living in a world replete with large complex organizations managing risky technological systems The legacy of open air detonations in Nevada pushes us to ask about the kinds of risks we are unwittingly living under today What risks

are we being exposed to by large organizations under the guise of security and science **Bombing the Marshall Islands**
 Keith M. Parsons, Robert A. Zaballa, 2017-07-26 A narrative history of the nuclear tests conducted by the United States in the Marshall Islands from 1946 to 1958 The Republic of Nature Mark Fiege, 2012-03-20 In the dramatic narratives that comprise The Republic of Nature Mark Fiege reframes the canonical account of American history based on the simple but radical premise that nothing in the nation's past can be considered apart from the natural circumstances in which it occurred Revisiting historical icons so familiar that schoolchildren learn to take them for granted he makes surprising connections that enable readers to see old stories in a new light Among the historical moments revisited here a revolutionary nation arises from its environment and struggles to reconcile the diversity of its people with the claim that nature is the source of liberty Abraham Lincoln an unlettered citizen from the countryside steers the Union through a moment of extreme peril guided by his clear-eyed vision of nature's capacity for improvement In Topeka Kansas transformations of land and life prompt a lawsuit that culminates in the momentous civil rights case of *Brown v Board of Education* By focusing on materials and processes intrinsic to all things and by highlighting the nature of the United States Fiege recovers the forgotten and overlooked ground on which so much history has unfolded In these pages the nation's birth and development pain and sorrow ideals and enduring promise come to life as never before making a once familiar past seem new The Republic of Nature points to a startlingly different version of history that calls on readers to reconnect with fundamental forces that shaped the American experience For more information visit the author's website <http://republicofnature.com> **Senate documents**, 1881 *List of Private Claims Brought Before the Senate, from the Commencement of the Fourteenth to the Close of the Thirtieth Congress* United States. Congress. Senate, 1849 Convergence Peter Watson, 2017-02-21 Those seeking a grand overview of science's greatest hits over the past century will find it here *The Washington Post* Peter Watson's bold history of science offers a powerful argument that the many disparate scientific branches are converging on the same truths Convergence is a history of modern science with an original and significant twist Various scientific disciplines despite their very different beginnings have been coming together over the years converging and coalescing Intimate connections have been discovered between physics and chemistry psychology and biology genetics and linguistics In this groundbreaking book Peter Watson identifies one extraordinary master narrative capturing how the sciences are slowly resolving into one overwhelming interlocking story about the universe Watson begins his narrative in the 1850s the decade when he argues the convergence of the sciences began The idea of the conservation of energy was introduced in this decade as was Darwin's theory of evolution both of which rocketed the sciences forward and revealed unimagined interconnections and overlaps between disciplines Decade after decade the story captures every major scientific advance en route to the present proceeding like a cosmic detective story or the world's most massive code-breaking effort Fascinating Highly recommended Watson treats biology chemistry and physics as entangled plotlines and readers' excitement will build as more connections are made Library

 Kelstrup,2016-05-20 In the 21st century think tanks have become more than a buzzword in European public discourse They
 now play important roles in the policy making process by providing applied research building networks and advocating
 policies The book studies the development of think tanks and contemporary consequences in the United Kingdom Germany
 Denmark and at the EU level A Continental think tank tradition in which the state plays a pivotal role and an Anglo American
 tradition which facilitates interaction in public policy on market like terms have shaped the development of think tanks On
 the basis of a typology of think tanks quantitative data and interviews with think tank practitioners the interplay between
 state and market dynamics and the development of different types of think tanks is analysed Although think tanks develop
 along different institutional trajectories it is concluded that the Anglo American tradition has had a significant cross cutting

World War II and the West It Wrought Mark Brilliant,David M. Kennedy,2020-04-28 Few episodes in American history
 were more transformative than World War II and in no region did it bring greater change than in the West Having lifted the
 United States out of the Great Depression World War II set in motion a massive westward population movement ignited a
 quarter century boom that redefined the West as the nation s most economically dynamic region and triggered
 unprecedented public investment in manufacturing education scientific research and infrastructure an economic revolution
 that would lay the groundwork for prodigiously innovative high tech centers in Silicon Valley the Puget Sound area and
 elsewhere Amidst robust economic growth and widely shared prosperity in the post war decades Westerners made significant

strides toward greater racial and gender equality even as they struggled to manage the environmental consequences of their region's surging vitality. At the same time, wartime policies that facilitated the federal withdrawal of Western public lands and the occupation of Pacific islands for military use continued an ongoing project of U.S. expansionism at home and abroad. This volume explores the lasting consequences of a pivotal chapter in U.S. history and offers new categories for understanding the post-war West. Contributors to this volume include Mark Brilliant, Geraldo L. Cadava, Matthew Dallek, Mary L. Dudziak, Jared Farmer, David M. Kennedy, Daniel J. Kevles, Rebecca Jo Plant, Gavin Wright, and Richard White. **Something Incredibly**

Wonderful Happens K.C. Cole, 2024-05-31 How do we reclaim our innate enchantment with the world? And how can we turn our natural curiosity into a deep abiding love for knowledge? Frank Oppenheimer, the younger brother of the physicist J. Robert Oppenheimer, was captivated by these questions and used his own intellectual inquisitiveness to found the Exploratorium, a powerfully influential museum of human awareness in San Francisco that encourages play, creativity, and discovery all in the name of understanding. In this elegant biography, K.C. Cole investigates the man behind the museum with sharp insight and deep sympathy. The Oppenheimers were a family with great wealth and education, and Frank, like his older brother, pursued a career in physics. But while Robert was unceasingly ambitious and eventually came to be known for his work on the atomic bomb, Frank's path as a scientist was much less conventional. His brief fling with the Communist Party cost him his position at the University of Minnesota, and he subsequently spent a decade ranching in Colorado before returning to teaching. Once back in the lab, however, Frank found himself moved to create something to make the world meaningful after the bombing of Hiroshima and Nagasaki. He was inspired by European science museums and he developed a dream of teaching Americans about science through participatory museums. Thus was born the magical world of the Exploratorium, forever revolutionizing not only the way we experience museums but also science education for years to come. Cole has brought this charismatic and dynamic figure to life with vibrant prose and rich insight into Oppenheimer as both a scientist and an individual. **Beyond Engineering**
