**Victoria Cross Heroes: Volume II** Michael Ashcroft, 2016-11-08 Foreword by Lance Sergeant Johnson Beharry VC THE VICTORIA CROSS is Britain and the Commonwealth's most prestigious gallantry medal for courage in the face of the enemy. It has been bestowed upon 1 355 heroic individuals from all walks of life since its creation during the Crimean War. Lord Ashcroft, who has been fascinated with bravery since he was a young boy, now owns 200 VCs by far the largest collection of its kind in the world. Following on from the bestselling *Victoria Cross Heroes* first published in 2006 to mark the 150th anniversary of the award, *Victoria Cross Heroes Volume II* gives extraordinary accounts of the bravery behind the newest additions to Lord Ashcroft's VC collection: those decorations purchased in the last decade. With nearly sixty action-packed stories of courageous soldiers, sailors and airmen from a range of global conflicts including the Indian Mutiny of 1857-58, the Second Anglo-Boer War of 1899-1902 and the First and Second World Wars, this book is a powerful testament to the strength of the human spirit and a worthy tribute to the servicemen who earned the Victoria Cross. Their inspirational deeds of valour and self-sacrifice should be championed and never forgotten.

**Network-on-Chip Architectures** Chrysostomos Nicopoulos, Vijaykrishnan Narayanan, Chita R. Das, 2009-09-18 2 The Cell Processor from Sony Toshiba and IBM STI 3 and the Sun UltraSPARC T1 formerly codenamed Niagara 4 signal the growing popularity of such systems. Furthermore, Intel's very recently announced 80-core TeraFLOP chip 5 exemplifies the irreversible march toward many-core systems with tens or even hundreds of processing elements. 1 2 The Dawn of the Communication-Centric Revolution The multi-core thrust has ushered the gradual displacement of the computer-centric design model by a more communication-centric approach. 6 The large sophisticated monolithic modules are giving way to several smaller simpler processing elements working in tandem. This trend has led to a surge in the popularity of multi-core systems which typically manifest themselves in two distinct incarnations: heterogeneous Multi-Processor Systems on Chip (MPSoC) and homogeneous Chip Multi-Processors (CMP). The SoC philosophy revolves around the technique of Platform-Based Design (PBD) 7 which advocates the reuse of Intellectual Property (IP) cores in flexible design templates that can be customized accordingly to satisfy the demands of particular implementations. The appeal of such a modular approach lies in the substantially reduced Time-To-Market (TTM) incubation period, which is a direct outcome of lower circuit complexity and reduced design effort. The whole system can now be viewed as a diverse collection of pre-existing IP components integrated on a single die.
