Michael D. Walker, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis of management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good in depth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered *Cancer Treatment and Research* is a series of authoritative volumes which aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc Second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more

Oncology of CNS Tumors Jörg-Christian Tonn,Manfred Westphal,J. T. Rutka,2010-02-03 Knowledge about the etiology and diagnosis as well as treatment concepts of neuro oncologic diseases is rapidly growing This turnover of knowledge makes it difficult for the physician engaged in the treatment to keep up to date with current therapies This book sets out to close the gap and pursues several innovative concepts As a comprehensive text on neuro oncology its chapters are interconnected but at the same time some chapters or subdivisions are so thoroughly assembled that the whole volume gives the impression of several books combined into one Neuropathology is treated in an extensive and clearly structured section The interested reader finds for each tumor entity the latest well referenced consensus regarding histologic and molecular pathology Through this book in the book concept information on neuropathology is readily at hand in a concise form and without overloading the single chapters Pediatric neuro oncology differs in many entities from tumors in adult patients also certain tumors of the CNS are typically or mainly found only in the child Therefore pediatric neuro oncology was granted its own book like section Tumor entities that are treated differently in children and adults are included both in the pediatric neuro oncology section and in the general section Entities that typically occur only in the child and adolescent are found in the pediatric section in order to avoid redundancies

Neuro-oncology Roger J. Packer,David Schiff,2012-04-30 Cancer imposes daunting effects on the nervous system Brain cancer is one of the most devastating diagnoses a physician can deliver Cancer of the nervous system can take many different forms Treatment is specific to the type of malignancy its location in the nervous system and increasingly its molecular characteristics The challenges manifest further when management choices need to be made and multidisciplinary approaches are required Additional complexities arise in children where the developing neurological system requires more sensitive treatment Neuro oncology unmasks the complexities to provide a straightforward guide to cancers of the nervous system Following a general approach to diagnosis and treatment the clinical aspects of specific cancer types in adults and children are explained in practical terms A final section considers the effect of system cancer on the nervous system and the side effects of treatment Clinical in approach practical in execution Neuro oncology will help you diagnose and manage your patients more effectively Neurology in Practice Series Editors Robert A Gross MD PhD Department of Neurology University of Rochester Medical Center Rochester New York USA Jonathan W Mink MD PhD Department of Neurology University of Rochester Medical Center Rochester New

Neurologic Complications of Cancer Lisa M DeAngelis, Jerome B Posner, 2008-10-10 Patients with cancer can suffer from a bewildering variety of neurologic signs and symptoms The neurologic symptoms are often more disabling than the primary cancer Symptoms including confusion seizures pain and paralysis may be a result of either metastases to the nervous system or one of several nonmetastatic complications of cancer The physician who promptly recognizes neurologic symptoms occurring in a patient with cancer and makes an early diagnosis may prevent the symptoms from becoming permanently disabling or sometimes lethal This monograph an update of the first edition published in 1995 is divided into 3 sections The first classifies the wide variety of disorders that can cause neurologic symptoms the patient with cancer discusses the pathophysiology of nervous system metastases the pathophysiology and treatment of brain edema and

the approach to supportive care of common neurologic symptoms such as seizures pain and side effects of commonly used supportive care agents The second section is devoted to nervous system metastases addressing in turn brain spinal cord meningeal and cranial and peripheral nerve metastases describing clinical symptoms approach to diagnosis and current treatment The third section addresses several nonmetastatic complications of cancer and includes sections on vascular disease infections metabolic and nutritional disorders side chemotherapy radiation and other diagnostic and therapeutic procedures The final chapter addresses paraneoplastic syndromes The book is intended for practicing oncologists neurologists neurosurgeons and radiation oncologists as well as internists who treated patients with cancer Our attempt was to write a book that would assist oncologists in understanding neurologic problems and neurologists in understanding oncologic problems The book is also intended for physicians training to specialize in any of the above areas It includes a practical approach to the diagnosis and management of patients with neurologic disease who are with known to have cancer or in whom cancer is suspected

Metastatic Disease of the Nervous System David Schiff,M J Van den Bent,2018-01-04

Metastatic Disease of the Nervous System Volume 149 begins with an overview of the impact and range of direct neoplastic involvement of the central and peripheral nervous system comprehensively reviewing all aspects of brain metastases from clinical radiological and neuropathological manifestations to the roles of surgery radiation systemic and palliative therapy in their management and the complications of these interventions The clinical manifestations diagnosis and treatment of leptomeningeal dural spinal epidural and plexus metastases are also covered in detail Covers all aspects of brain metastases from clinical radiological and neuropathological manifestations to the roles of surgery radiation systemic and palliative therapy Presents a multidisciplinary review of the evidence regarding accuracy of diagnostic testing and evidence based reviews of therapies Addresses metastatic diseases of the nervous system for residents fellows and clinicians in neurology and oncology

Central Nervous System Metastases Rohan Ramakrishna,Rajiv S. Magge,Ali A. Baaj,Jonathan P.S. Knisely,2020-05-27 This is a multi specialty book on the diagnosis evaluation and treatment of CNS metastases of the brain and spine Written by renowned experts in their fields the book covers essential contemporary topics in CNS metastases care The book is divided into seven parts that begin with chapters that cover the fundamental biology of disease so that subsequent chapters on imaging diagnosis treatment and palliation can be properly contextualized This text also provides a framework for understanding the biology of radiation therapy so that radiation treatment options of the brain and spine can be more fully understood New medications and technologies are reviewed from the perspective of maximizing efficacy and minimizing toxicity independently and as combinatorial therapy Central Nervous System Metastases Diagnosis and Treatment serves as a practical reference for health care providers and trainees It provides the comprehensive detailed perspective required to provide holistic care to patients with metastatic disease to the brain and spine

Central

Nervous System Cancers Oncology Nursing Society, 2011 Considered one of the most devastating and frightening of all cancers cancers of the central nervous system CNS attack the complex organs that control not only the CNS but also the peripheral nervous system and many of the voluntary and involuntary body systems with 20% to 40% of CNS cancers metastasizing to the brain Site Specific Cancer Series Central Nervous System Cancers a new volume in the Series edited by Deborah Hutchinson Allen and Laurie L Rice details the cancers of the brain and spinal cord Chapters examine issues such as anatomy and physiology of the brain and spine patient assessment pathology histology and molecular markers of primary brain tumors and adult and pediatric cancers of the brain and spinal cord Other issues include treatment modalities surgical treatments chemotherapy and radiotherapy as well as pediatric therapeutic modalities symptom management and psychological issues and the current state of evidence based practice You can use this new volume as a guide to treating your patients and to providing sensitive and realistic care that optimizes the quality of life and permits a sense of hopefulness to prevail when many patients with type of cancer feel only pain and fear

Central Nervous System Metastases in Lung Cancer Patients: From Prevention to Diagnosis and Treatment Lizza E.L Hendriks, Deepa S. Subramaniam, Anne-Marie C. Dingemans, 2019-01-21 Approximately 40% of lung cancer patients will develop central nervous system CNS metastases during the course of their disease Most of these are brain metastases but up to 10% will develop leptomeningeal metastases Known risk factors for CNS metastases development are small cell lung cancer SCLC adenocarcinoma histology epidermal growth factor receptor EGFR mutant or anaplastic lymphoma kinase ALK rearranged lung cancer advanced nodal status tumor stage and younger age CNS metastases can have a negative impact on quality of life QoL and overall survival OS The proportion of lung cancer patients diagnosed with CNS metastases has increased over the years due to increased use of brain imaging as part of initial cancer staging advances in imaging techniques and better systemic disease control Post contrast gadolinium enhanced magnetic resonance imaging gd MRI is preferred however when this is contra indicated a contrast enhanced computed tomography CE CT is mentioned as an alternative option When CNS metastases are diagnosed local treatment options consist of radiotherapy stereotactic or whole brain and surgery Local treatment can be complicated by symptomatic radiation necrosis for which no high level evidence based treatment exists Moreover differential diagnosis with metastasis progression is difficult Systemic treatment options have expanded over the last years Until recently chemotherapy was the only treatment option with a poor penetration in the CNS Angiogenesis inhibitors are promising in the treatment of primary CNS tumors as well as radiation necrosis but clinical trials of anti angiogenic agents in NSCLC have largely excluded patients with CNS metastases Furthermore research has also focused on methods to prevent development of CNS disease for example with prophylactic cranial irradiation Recently checkpoint inhibitors have become available for NSCLC patients and tyrosine kinase inhibitors TKIs have improved prognosis significantly in those with a druggable driver mutation Newer TKIs are often designed to have better CNS penetration compared to first generation TKIs Despite advances in treatment options

CNS metastases remain a problem in lung cancer and cause morbidity and mortality This Research Topic provides an extensive resource of articles describing advances in CNS metastases management in lung cancer patients from prevention to diagnosis and treatment

Neurosurgical Treatment of Central Nervous System Tumors Pietro Mortini, Filippo Gagliardi, 2024-12-02 In this book the most recent technical and technological advancements in the treatment of intracranial tumours will be described and a wide and updated review of the literature on neurosurgical pathologies with high clinical impact will be offered to the readers Technical nuances and surgical pearls as well as tricks suggested by the most renowned experts in the field will be explained and illustrated in the light of the most modern approach to oncological neurosurgical pathologies Each surgical technique will be contextualized in a multi modal approach to the pathology defining specific aims and goals of surgery and a comparative analysis of surgical and clinical results deriving from the different approaches will be systematically discussed analyzing the specific drawbacks and advantages in approaching the different pathologies and emphasizing the preservation of patient s functioning and quality of life as well as the neurological status Through this book the editors aim to provide an effective educational support to already trained and experienced neurosurgeons who want to approach the multi modal management of intracranial tumors according to the principles of Evidence Based Medicine highlighting classes of evidence by using schemes and therapeutic algorithms based on most updated data available in the literature
